ONAP: ACM-R Instance Migration

<https://lfnetworking.org>

What is an Automation Composition?

Containers and Metadata Everywhere.....

....but not an App in sight!

....ACM allows you to **Manage your Apps**

Where is my App?

 Arbitrary Container

 Platform Container

 App 1

 App 2

 App 3

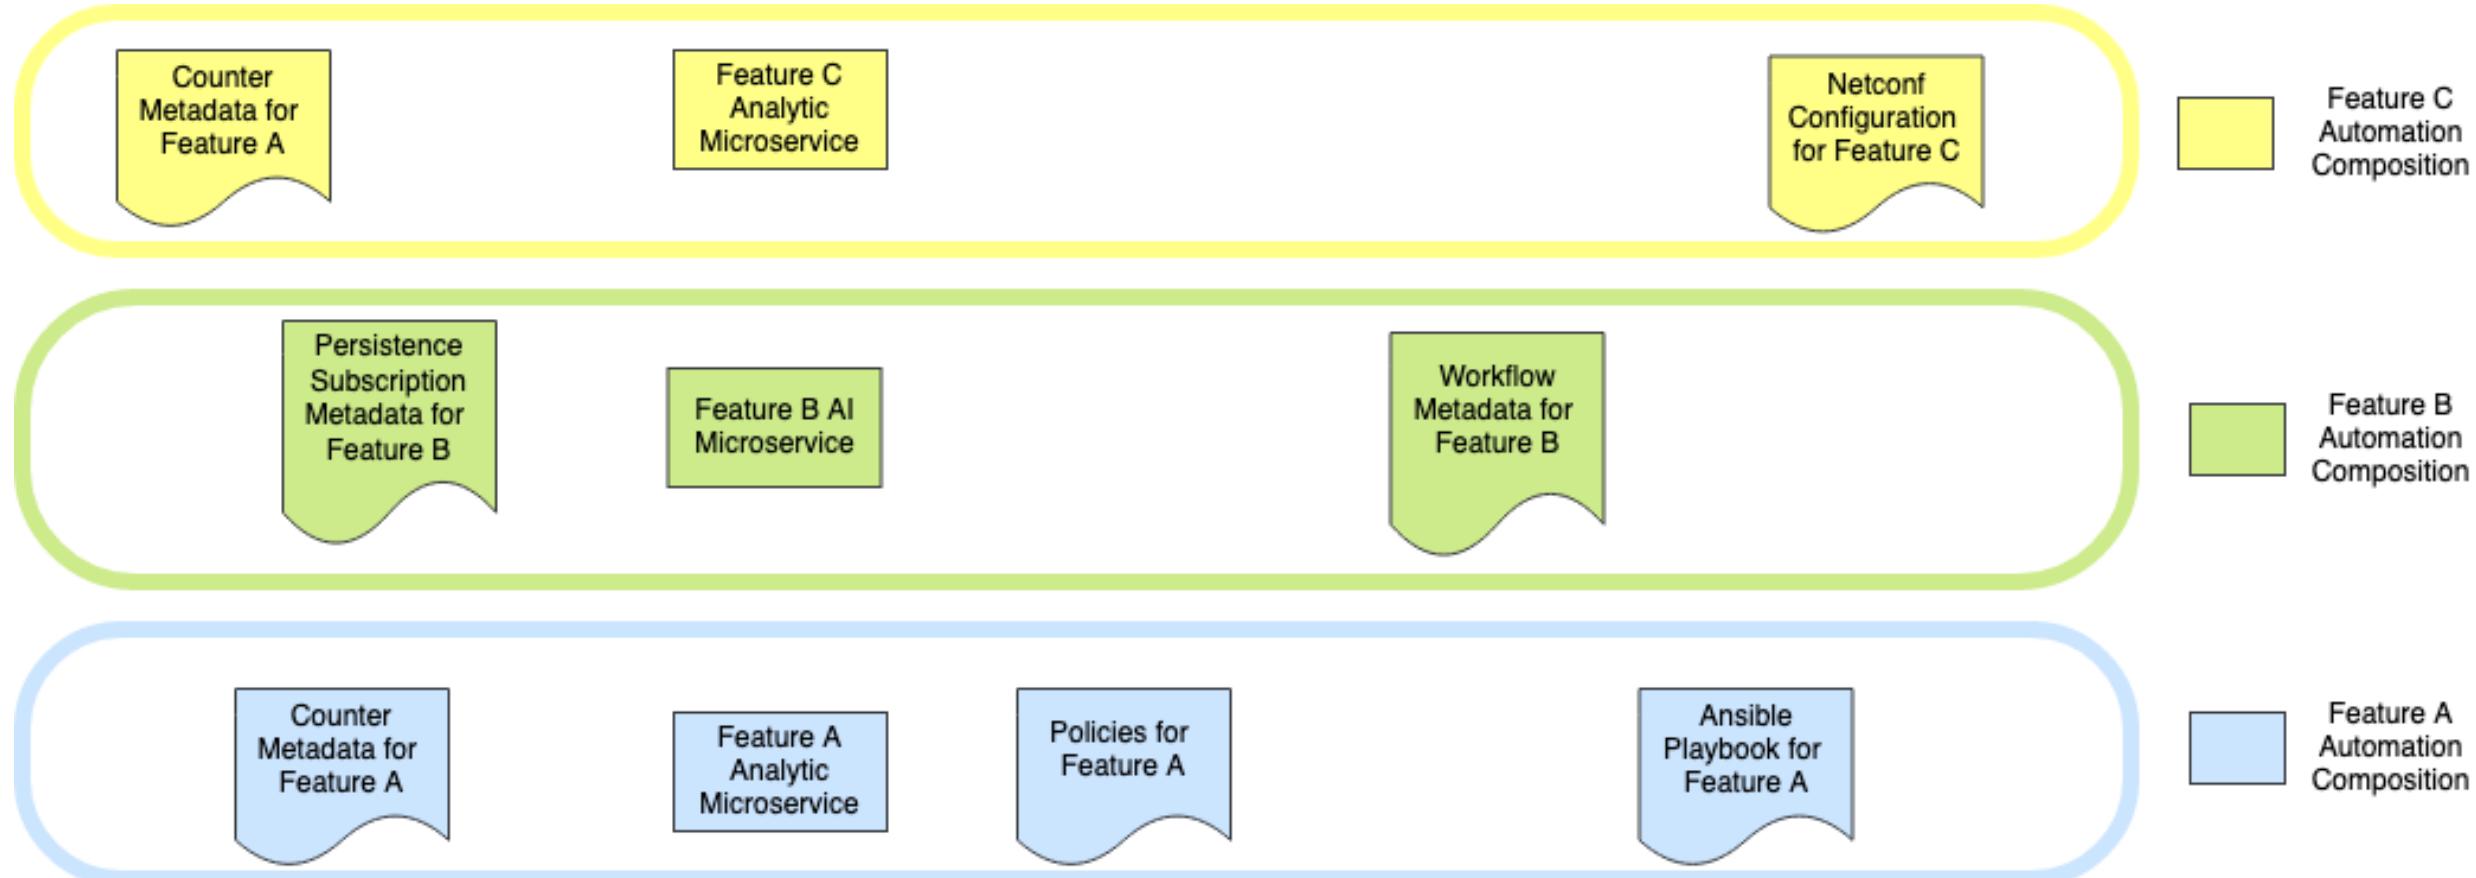

Helm just installs and uninstalls the containers

Microservices and Metadata delivering features

Automation Compositions

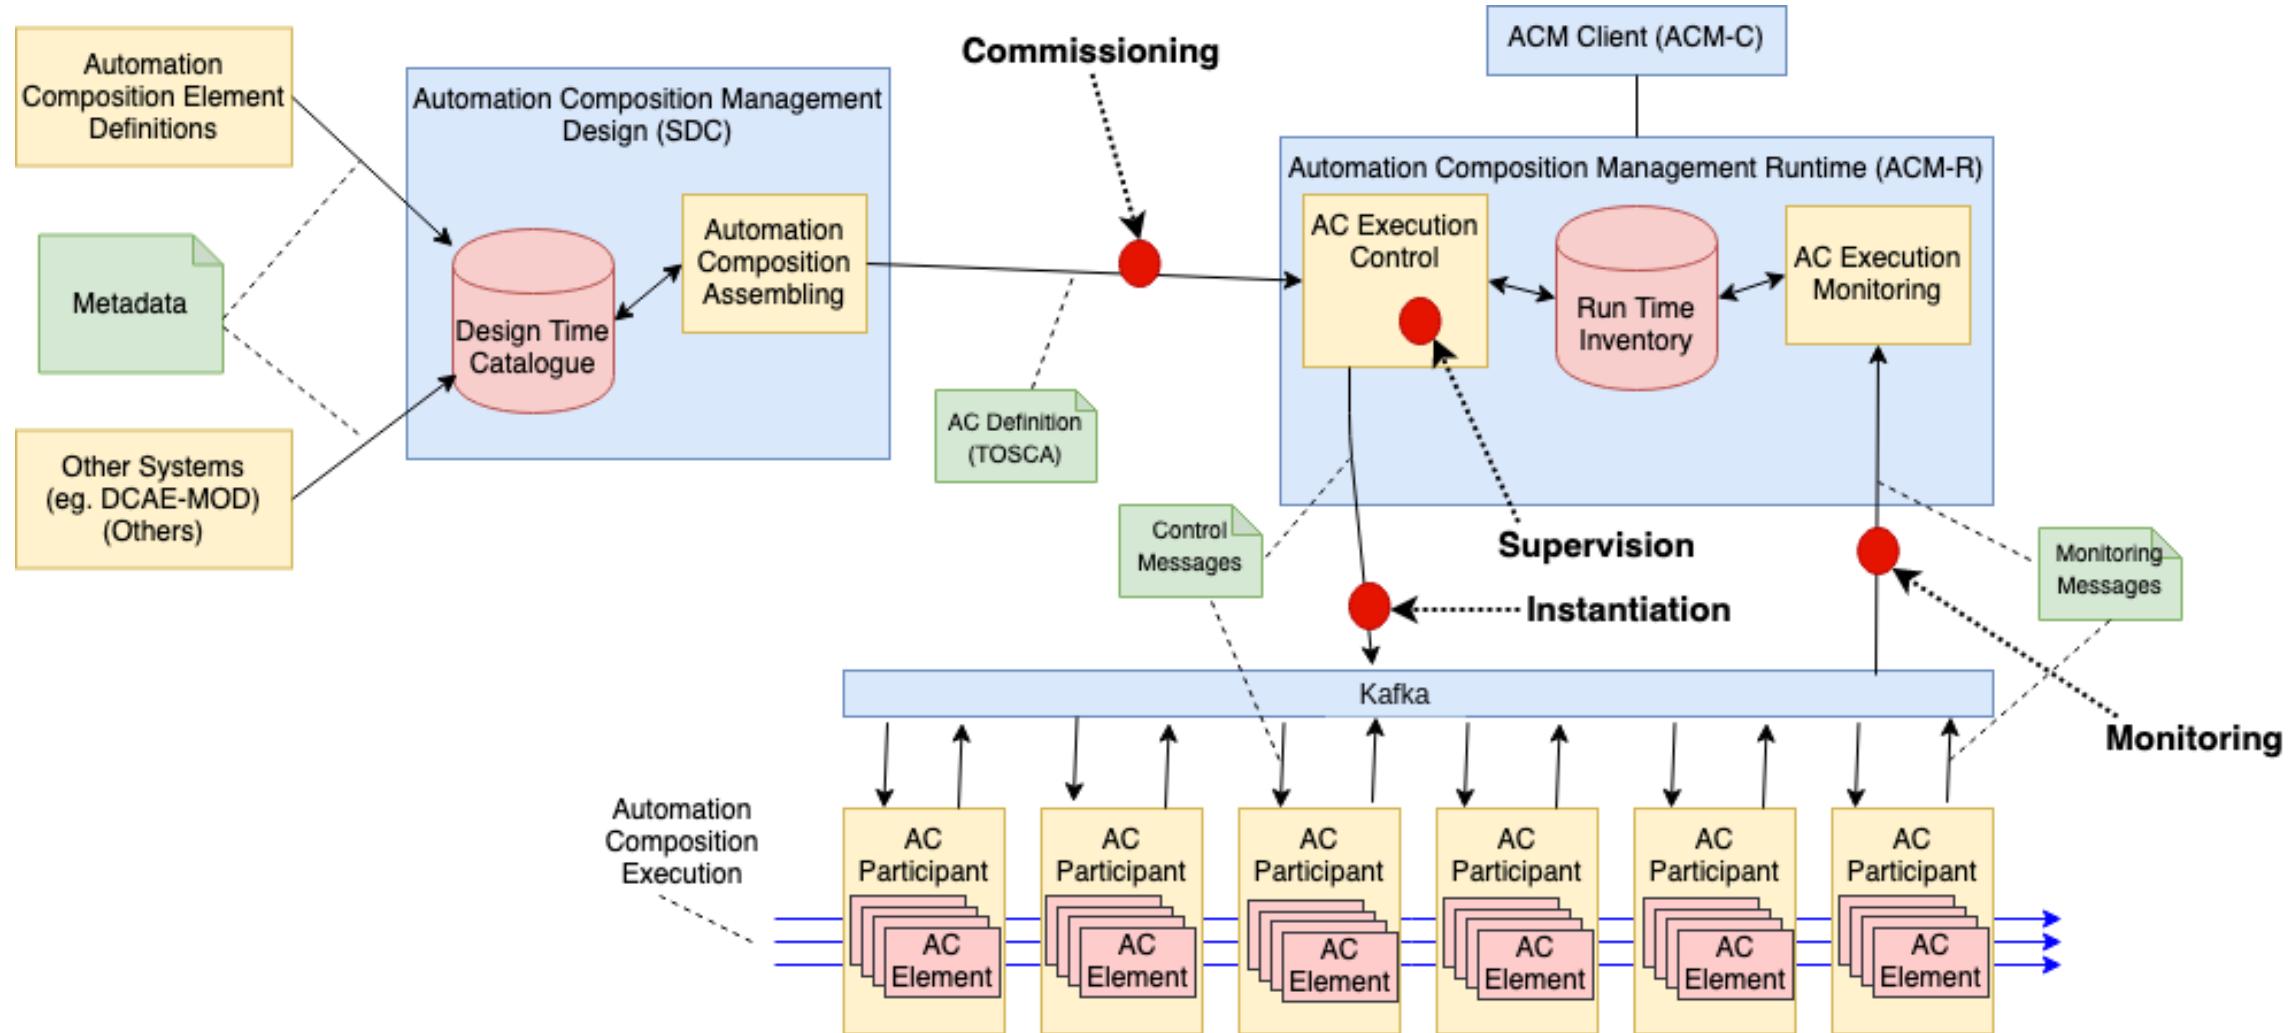

- Groups the microservices and metadata for features together
- ACM is the backend for App Management in EIAP

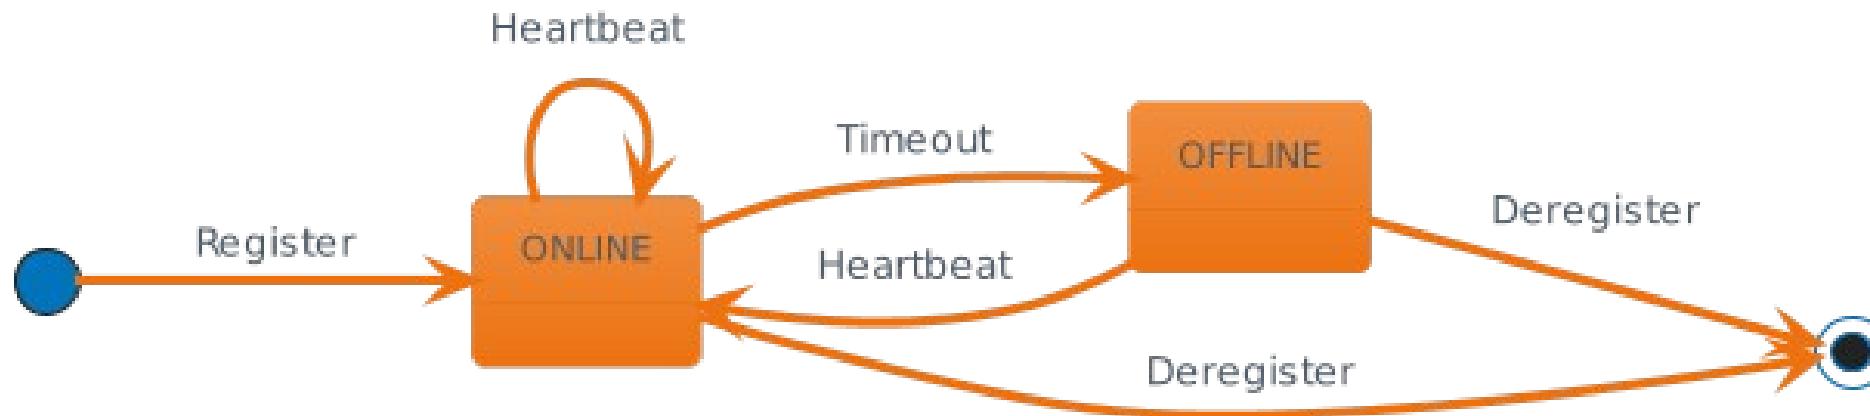

What is Supported?

- Defining Automation Compositions
- Automation Composition Commissioning and Decommissioning
- Set parameters on Automation Compositions
- Managing the Automation Composition life cycle
 - Instantiation
 - Status Monitoring
 - State Change (Deploy, Undeploy, Lock, Unlock)
 - Property Update
 - **Migration**
 - Removal

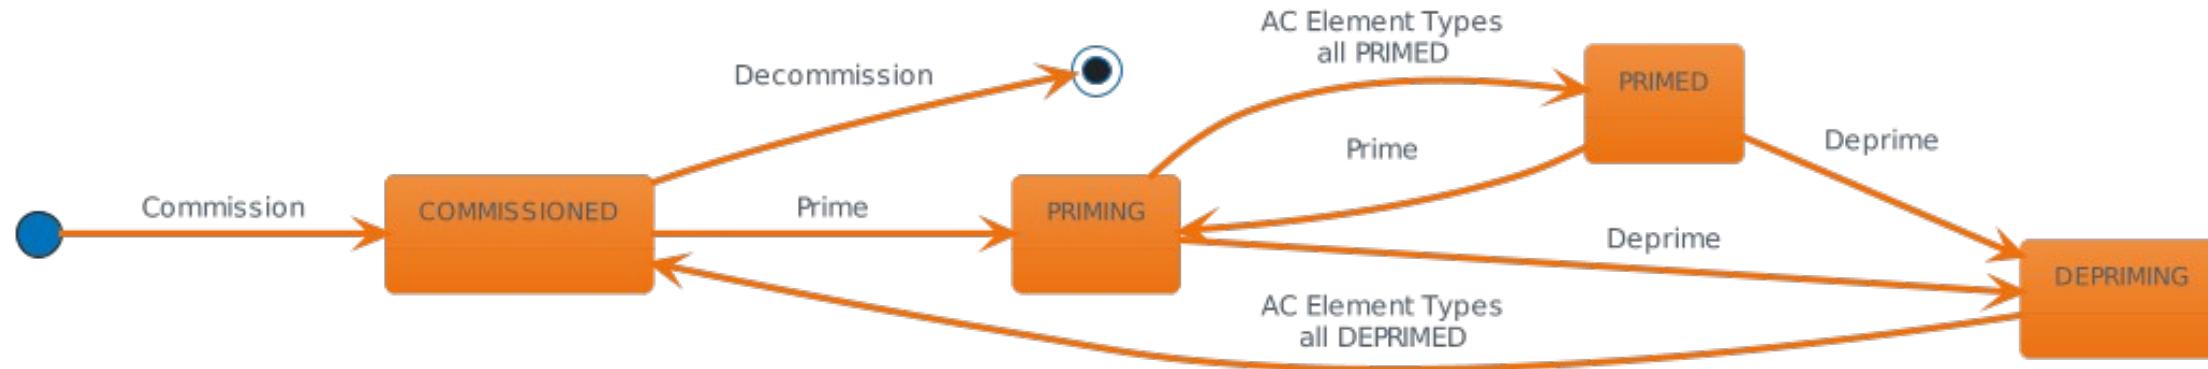

Automation Composition Management

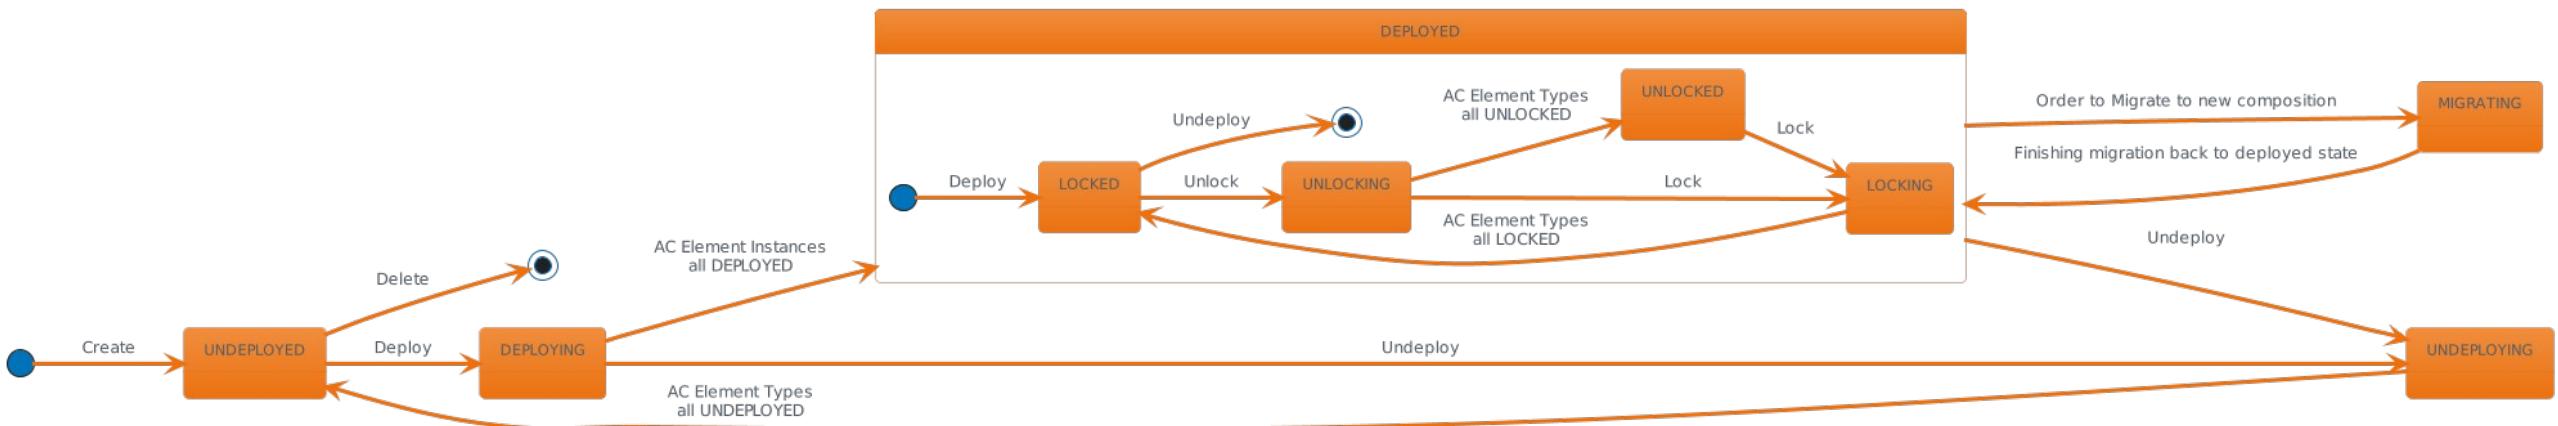

State Change 1: Participant

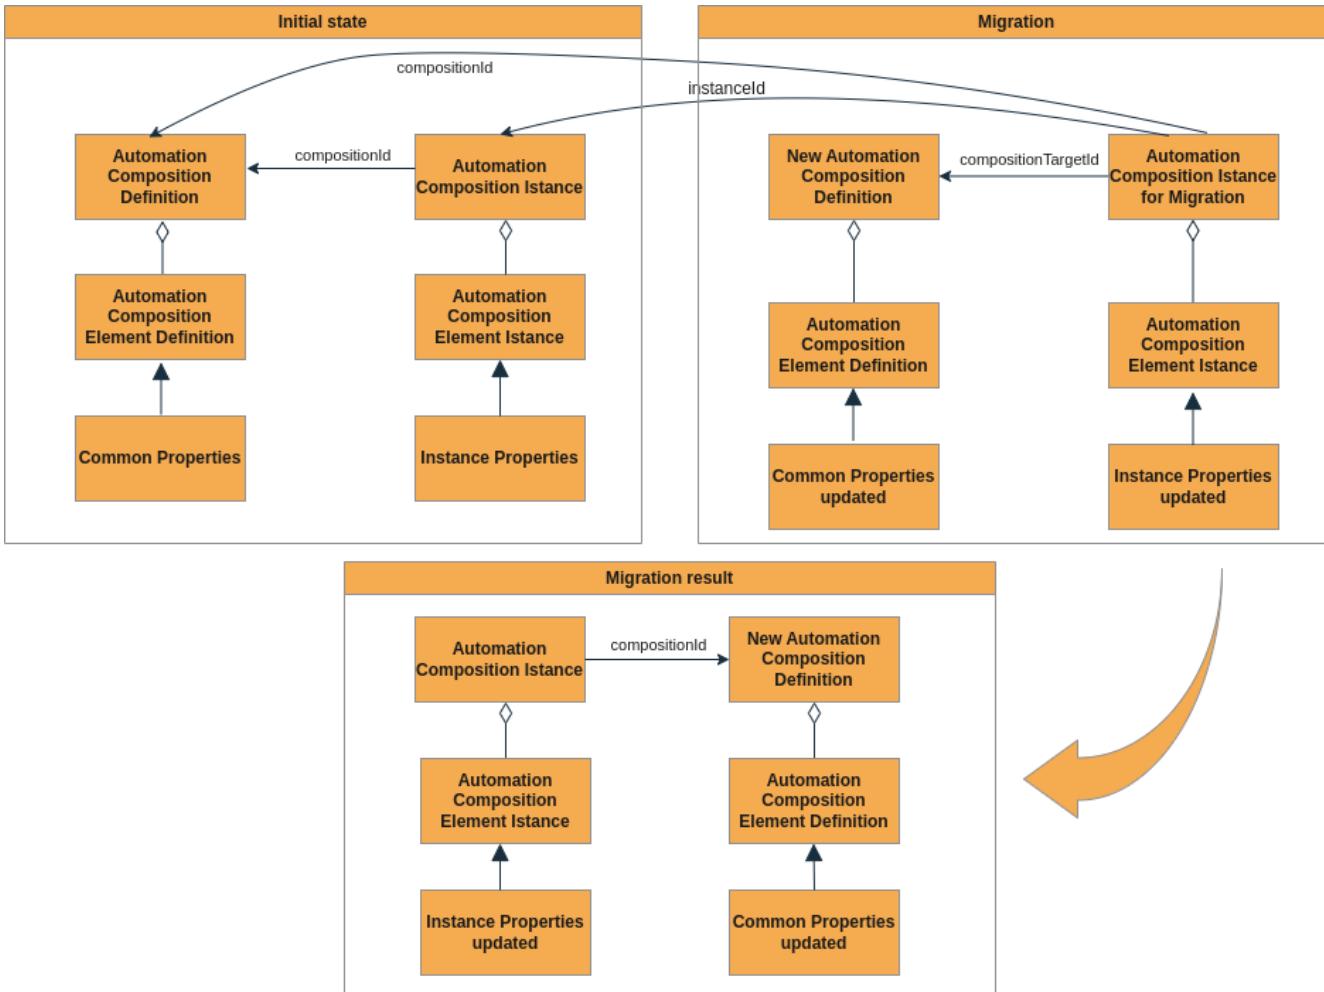

State Change 2: AC Definition

State Change 3: AC Instance with Migration

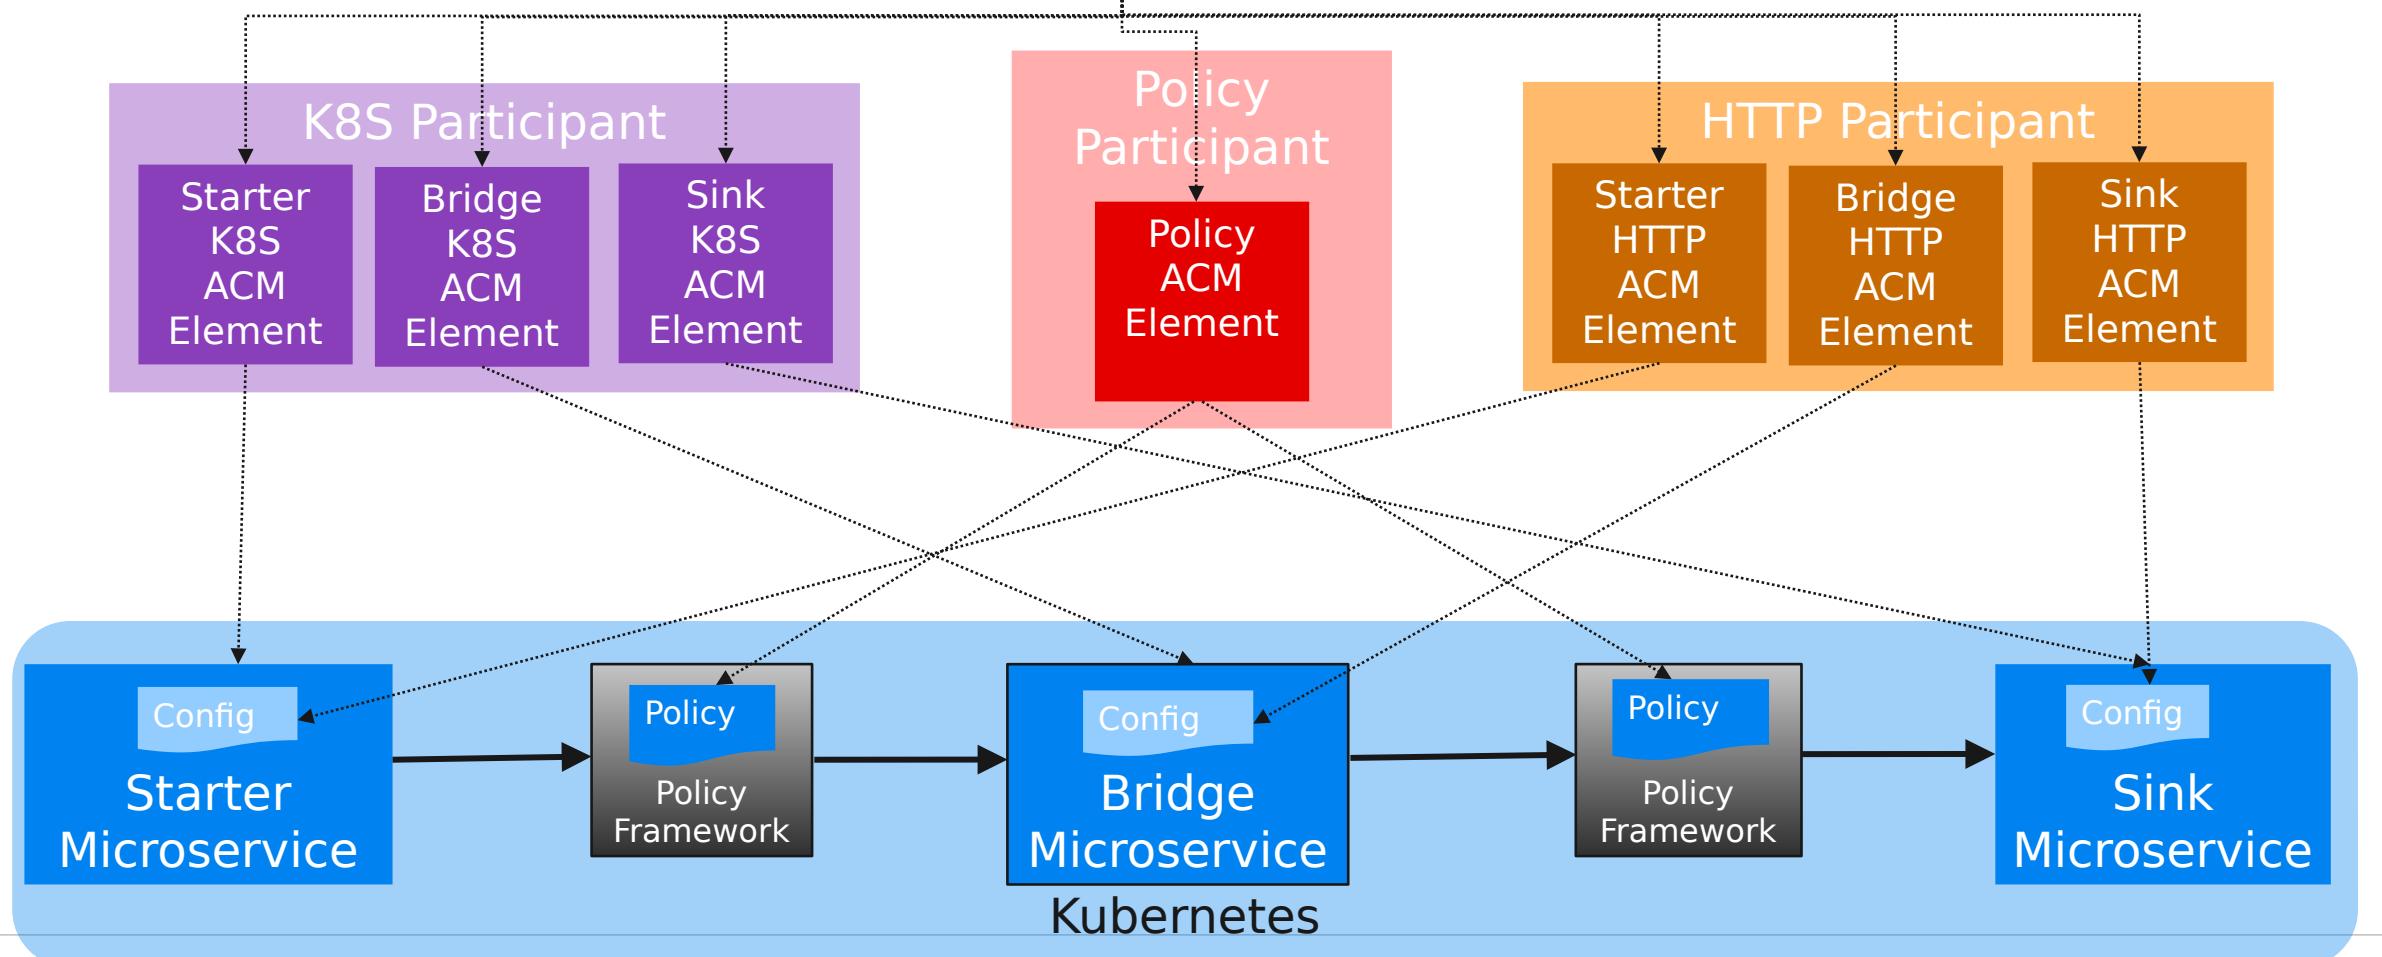

Instance Migration

- The newest feature added is migration.
- An instance of an automation composition that is based on a composition definition can now be “migrated” to a new composition definition.
- The mechanism is illustrated.
- Any migration-specific actions that need to be carried out, can be done by use of the “migrate” method in the participants involved.
- The old definition can be deleted or perhaps used again later.

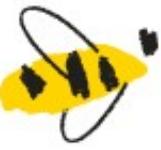

Demonstration

Demonstration

Defined in TSCA (YAML)

```
onap.policy.clamp.ac.element.AutomationCompositionDefinition:  
    type: org.onap.policy.clamp.acm.AutomationComposition  
    description: Automation composition for Demo  
    properties:  
        provider: ONAP  
        elements:  
            - name: onap.policy.clamp.ac.element.Policy_AutomationCompositionElement  
            - name: onap.policy.clamp.ac.element.K8S_StarterAutomationCompositionElement  
            - name: onap.policy.clamp.ac.element.K8S_BridgeAutomationCompositionElement  
            - name: onap.policy.clamp.ac.element.K8S_SinkAutomationCompositionElement  
            - name: onap.policy.clamp.ac.element.Http_StarterAutomationCompositionElement  
            - name: onap.policy.clamp.ac.element.Http_BridgeAutomationCompositionElement  
            - name: onap.policy.clamp.ac.element.Http_SinkAutomationCompositionElement
```
