### Slicing Order Management

Status :

No	Order Number	Business Name	Created Time	S-NSSAI	Use Interval (Month)	Status	Detail
1	36cc4dc7-87f2-45c4-98b9-ebf20f4f9715	myTest1	2020-01-08 05:56:17	01-29CE706B	12	Order created	<a href="#">View Detail</a>
2	5G-666	eMBB_Slice_Communication_Service_5G Customer	2019-12-12 03:56:00	01-010101	12	Order processing	<a href="#">View Detail</a>
3	e531c25e-4acc-45ac-b242-1ca4245700c0	ONAP-5G-SO-test-200109	2020-01-09 07:09:17	01-5FD83B8	3	Order processing	<a href="#">View Detail</a>

Parameter name	Csmf portal	input
Slice name	Slice name	Slice name
maxNumberOfUEs	Number of connections	Option : 10000以下 10000-50000 50000-100000 100000-1000000 1000000以上
	expDataRateUL	option 5G 10G 50G 100G
	expDataRateDL	
	latency	20ms 50ms 100ms
	nomadicity	stationary, nomadic, restricted mobility, fully mobility.
TAList	area	Province/city/region
	duration	months
sharable	sharable	share, Exclusive

Will develop in Next  
phase

## Slice maintenance portal

Slice Task management

- 1、 planning
- 2、 suvery
- 3、 configuration check
- 4、 slicing instantiation

Slice management

- 1、 Slice management
- 2、 Slice instance management
- 3、 sub network slice management

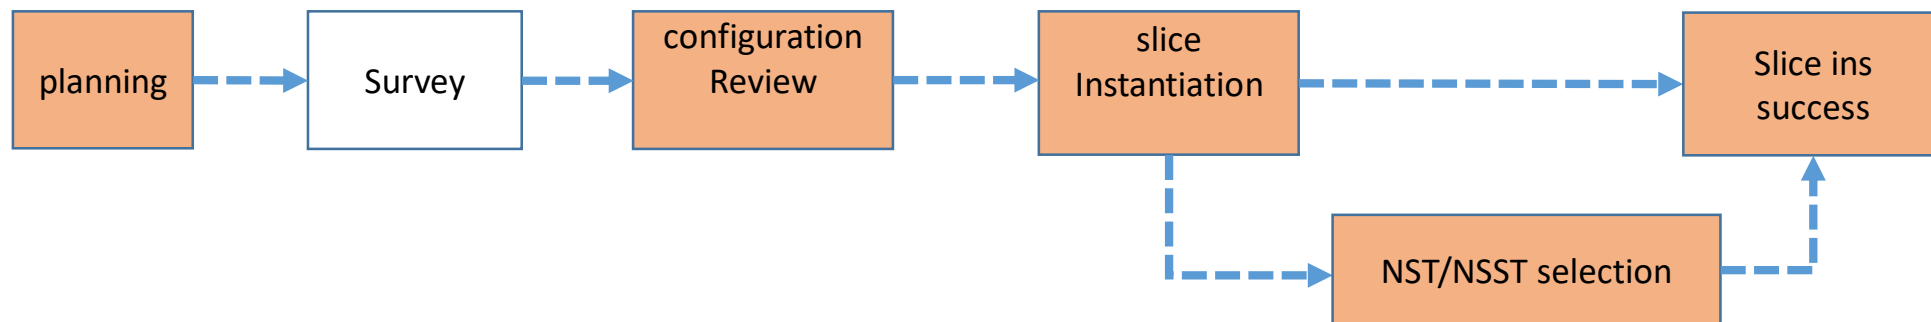

Performance monitor

- 1、 Slice list

# Slice service maintenance Process in portal

Slice instantiation

Slice instance activation

# Slice instantiation—configuration review

Slice task info----*from csmf portal*

Slice requirement info—just review

Parameter name	Csmf portal
Slice name	Slice name
maxNumberOfUEs	Number of connections
expDataRateUL	expDataRateUL
expDataRateDL	expDataRateDL
lantency	lantency
Mobility	nomadicity
nsCoverageAreaTAList	area
duration	duration
sharable	sharable

1. If Shared slice, NSMF will get one existing slice to use, and also can create new one
2. If NO shared slice, will create new slice, but the domain slice also can use the existing domain slice

Matched NST	NST ID	NST name	Matched NSI	NSI ID	NSI name	modify

1. Wireless/core network/transmission parameter adjust

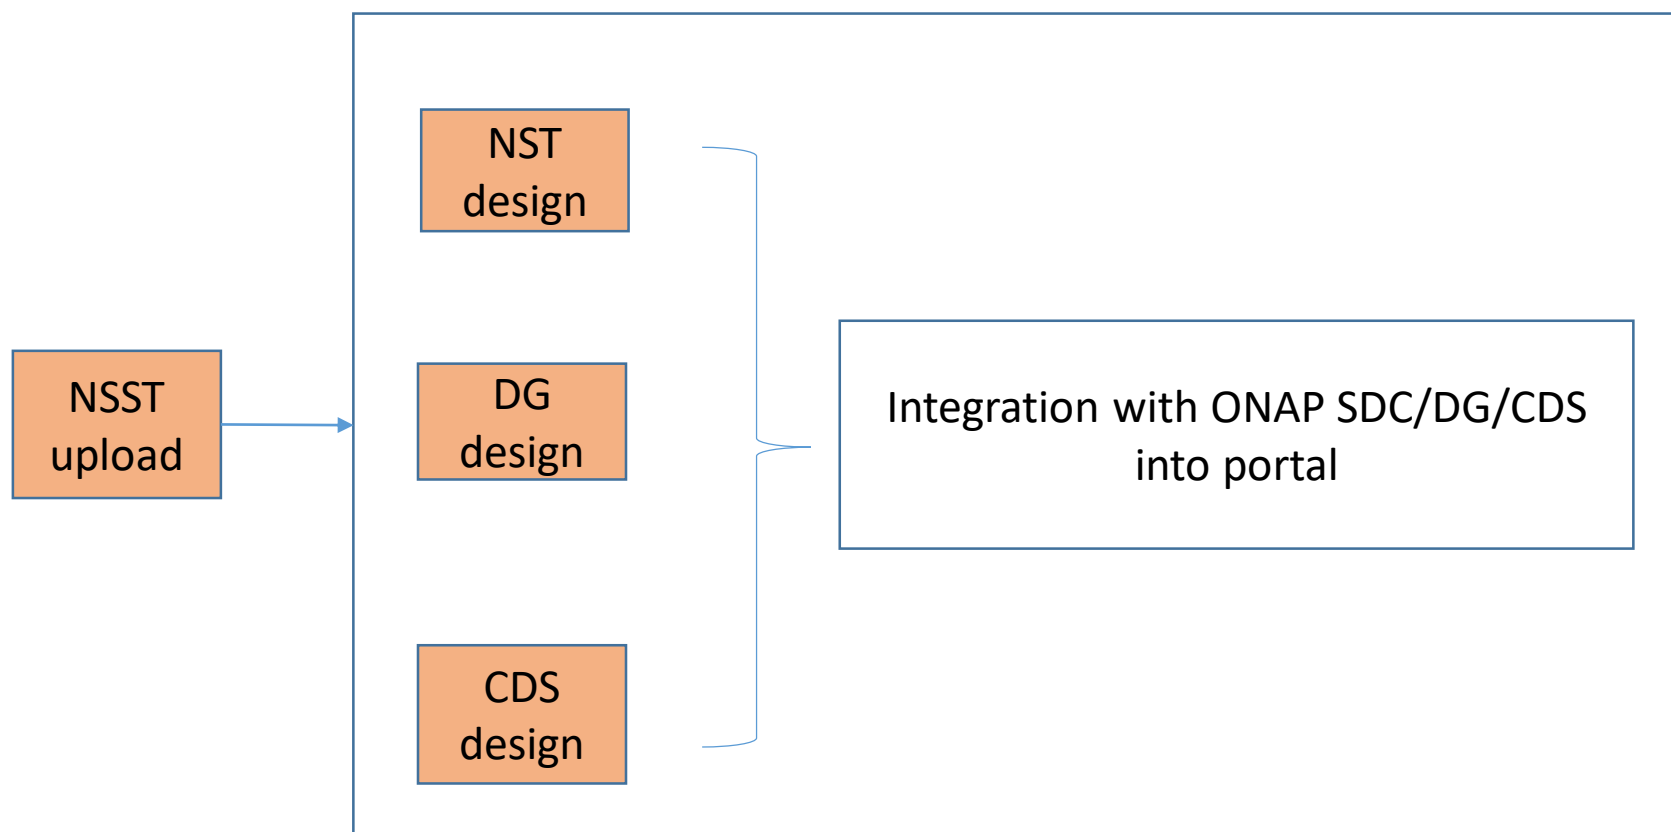

Wireless domain	Wireless slice instance ID:xxxxxxx, slice name:xxxxx	modify	parameter
Core network domain	Core network slice instance ID:xxxxxxx, slice name:xxxxx	modify	parameter
Transmission domain	Transmission slice instance ID:xxxxxxx, slice name:xxxxx	modify	parameter

Submit

# Design-time portal (next planning)

The propose is to integrate with all related all-in-one portal, and improve the design usability

# Next Planning

- Integration with the SDC/CDS/DG portal in 5G slice project, make sure one-step to achieve design to run-time;
- Continue to optimize the operating experience of ONAP, including Service design, closed-loop design, and Service instantiation process;
- Based on the 3GPP protocol, continue to develop slice business updates. Integrated AN / TN / CN domain slice lifecycle management

**ONAP**

OPEN NETWORK AUTOMATION PLATFORM

Thank You!
