

Attendees: Kodilinye Atuchukwu, Lincoln Lavoie, Margaret Chiosi, Rabi Abdel, Steven Wright, Trevor Cooper, Tapio Tallgren

Joining from The Linux Foundation: Phil Robb, Min Yu

Agenda

- Updates on VNF Certification - Steven Wright
- LFN Evolution - Rabi Abdel
- OPNFV / ONAP DDF CVC Session
- Any other business

Minutes

- Updates on VNF Certification - Steven Wright
 - Steven provided the update that the ONAP TSC recently agreed that the VNF Requirements Project will be the single point of contact on overall ONAP certification requirements and badges.
 - Margaret asked about the Auto Project and noted the need to clarify how it relates to integration and compliance testing.
 - Steven will provide the latest slides for the VNF Certification session at the ONAP DDF-OPNFV Plugfest. Margaret and Ryan will lead the discussion on site. Steven noted that this event is also an opportunity to discuss and understand other VNF tooling besides VNFSDK and how and when they can be included in the compliance program. Following the discussion and feedback at the event, Steven has an action item to present a concrete proposal about VNF badges and scopes to the ONAP TSC later this month.
 - ONAP projects must submit their project plan for Dublin release and get them approved by the end of January. The plan is to align the VNF certification release with the same Dublin release timeline.
- LFN Evolution - Rabi Abdel
 - Rabi presented on LFN Compliance & Verification evolution and long term strategy for CVC. **Slides are attached.**
 - Margaret expressed concern about using GSMA and ETSI standards to define requirements.
 - Lincoln asked about the role of VVP. Margaret noted that both SDK and VVP are implementation projects/groups. She hopes that these two groups will collapse into one implementation group tracking both HEAT and TESCA tests.
 - Steven noted that the VNF compliance program for the Dublin release will mainly include packaging inspection test cases. Lincoln recommended following the consistent operational practice, as in OPNFV Verified program, of having the TSC sign off on the required/optional test cases to be included in each release.
- OPNFV / ONAP DDF CVC Session
 - Rabi and Steven's slides will be used to lead off the various compliance related sessions at the ONAP DDF and OPNFV Plugfest this week.
- Any other business

- Margaret is organizing a carrier panel at ONS focused on the importance of compliance/certification programs. She hopes to use this as a launching point for the LFN user group as well.
