Extending CI/CD to support Cloud Native VNEs and Operations

A Proposal for Discussion

Wenjing Chu @ Huawei

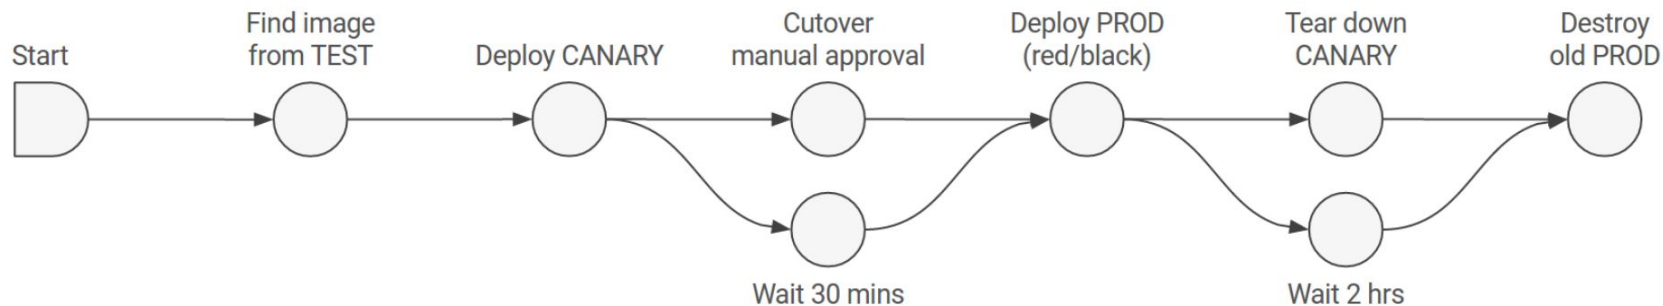

Being cloud native

- CNCF defines *cloud native* as
 - Containerized
 - Dynamically Managed by e.g. Kubernetes
 - *Micro-service oriented*
- *Micro-service oriented*
 - *The Service Mesh model (e.g. Istio, Conduit...)*

A Cloud native CD example

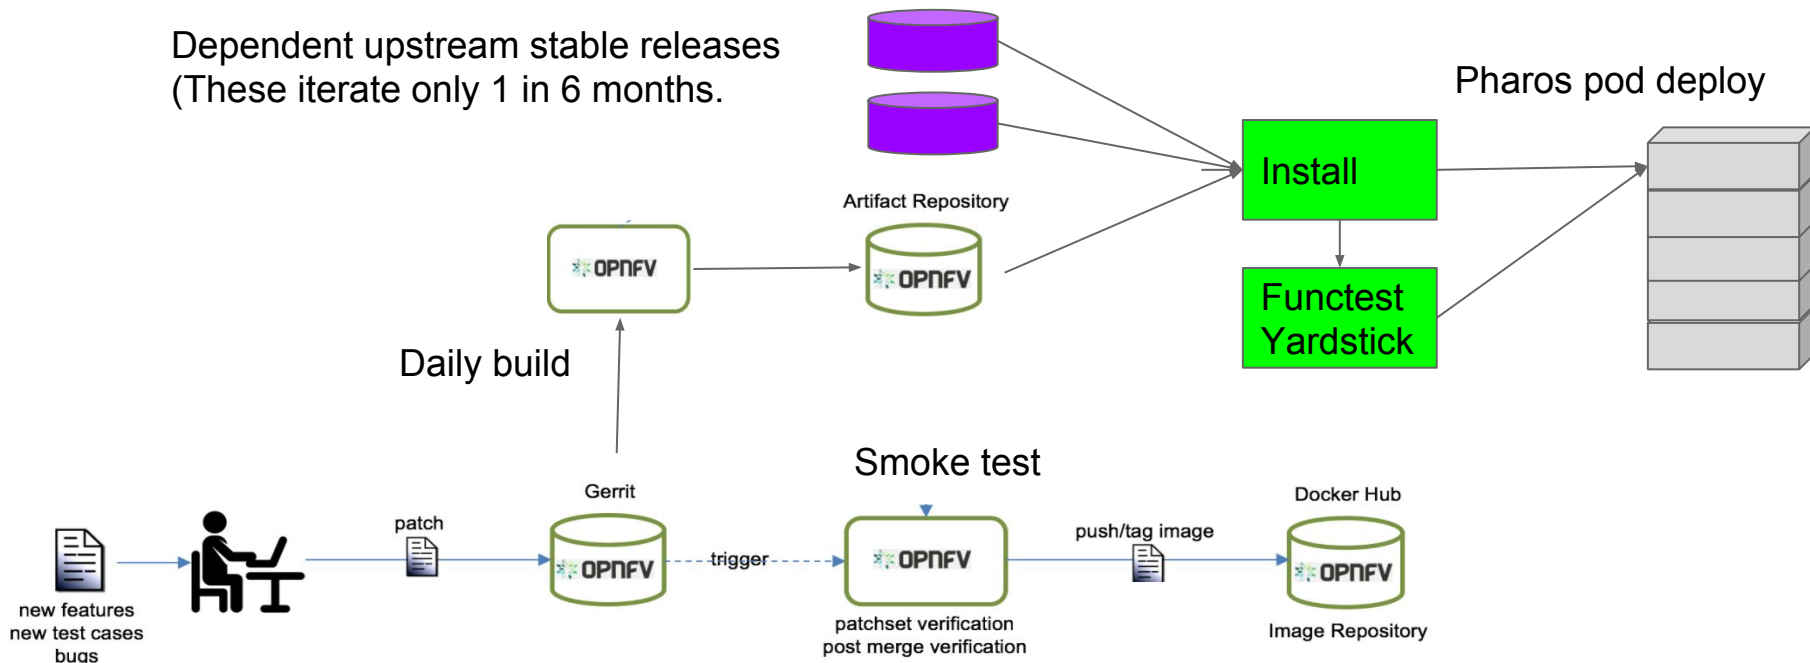

An example taken from Spinnaker doc:

Background: the existing CI

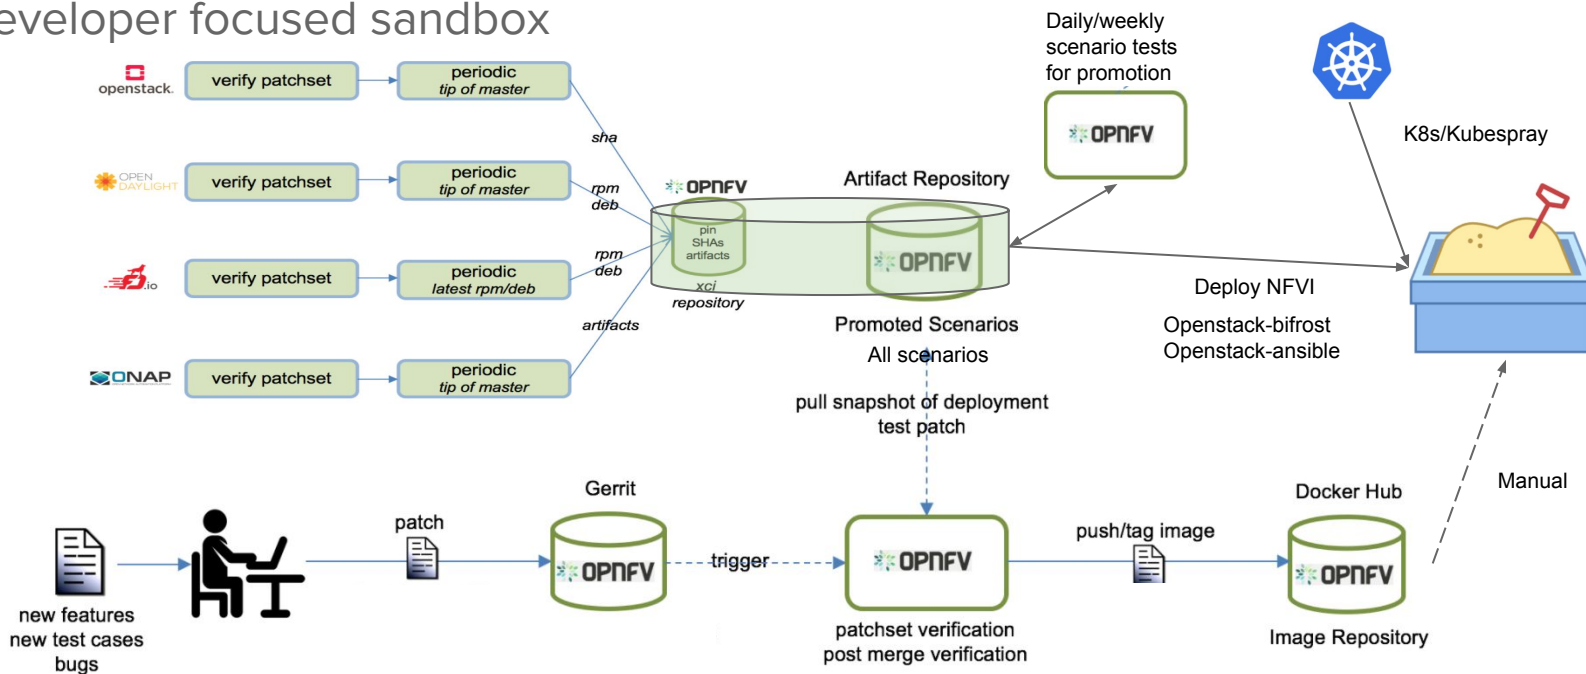

- A simplified illustration of the CI in OPNFV - inaccuracies are mine

Dependent upstream stable releases
(These iterate only 1 in 6 months.)

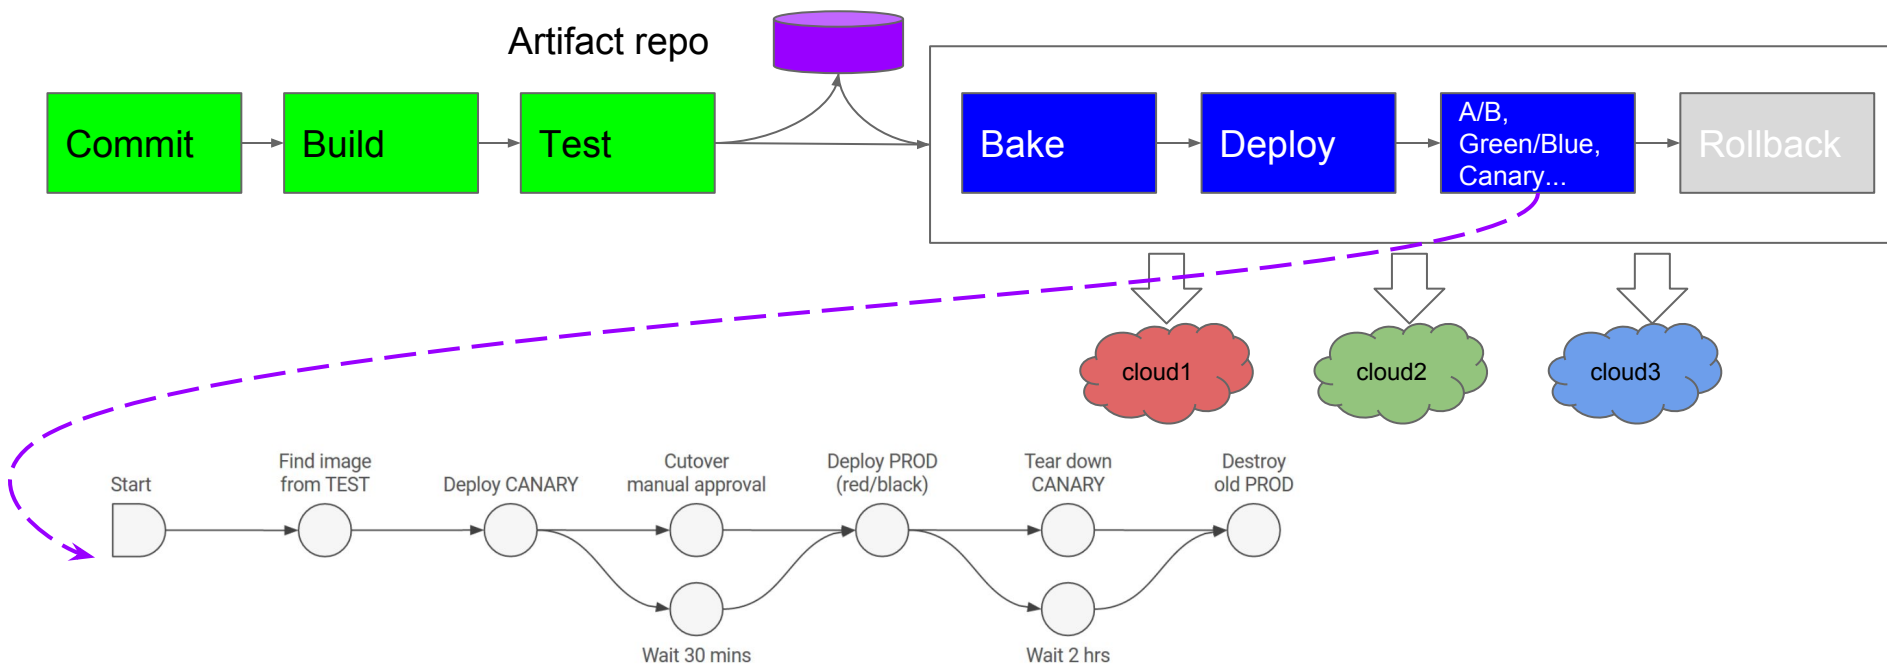

Background: the new XCI

- A simplified illustration - inaccuracies are mine
- Developer focused sandbox

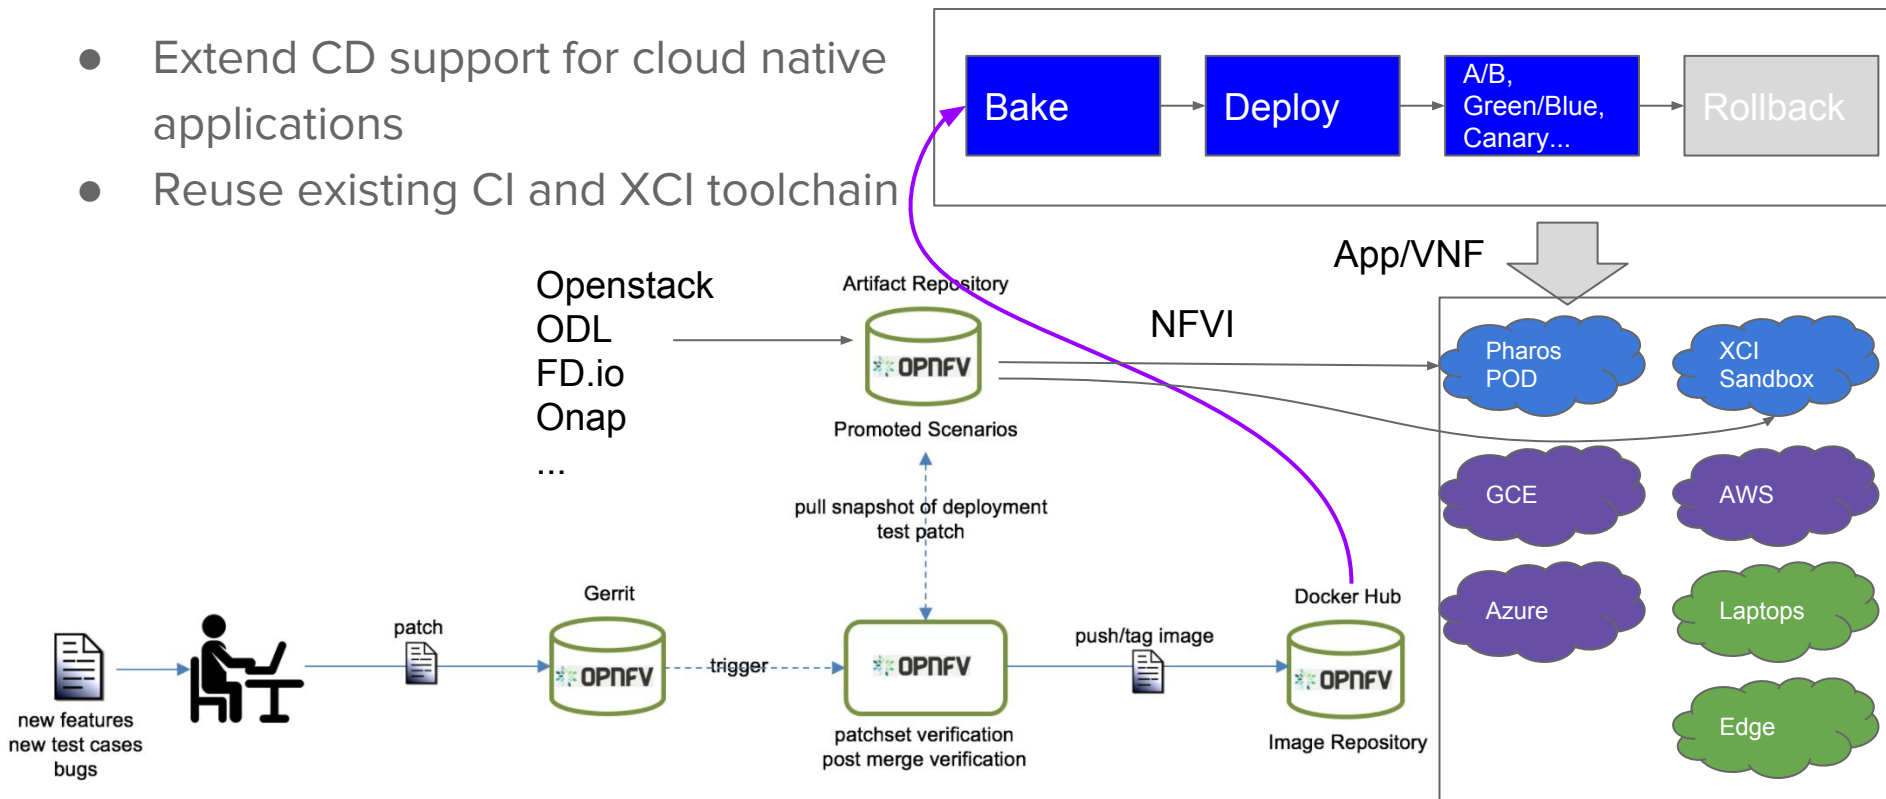

Cloud native CI/CD Requirements

- CD: Continuous delivery (and deployment) for applications
 - Fast-paced user driven/data driven CI/CD is a core competency for Cloud Native DevOps.

Extending CD to support Cloud native

- Extend CD support for cloud native applications
- Reuse existing CI and XCI toolchain

Next steps

- ONS 2018: getting feedbacks
- Gambia: Clover project is to develop a cloud native CD
 - Targeted for Gambia, Service Mesh architecture, Focused on CN-VNFs.
- Share experiences back to Infra WG/Releng and community
- Milestone rethinking and automation
- Request your feedback on generalized use of CD
 - E.g. VM-based, mixed, non-Service-Mesh
 - These are not currently in scope for Clover
 - Applicability/interests
- Q&A
