Key Takeaways:

- ODL had 77.37% of the total job costs this month and odl-csit was the highest job category cost (integration testing)
- ONAP growth in job costs related to upcoming release (Frankfurt)
- Caveats:
  - New Feature of Global Jenkins Job Builder provides build data where available (work in progress)

- Job counts are an indication of how much change happened to the code bases
- Total costs are based on cost data returned from cloud compute resources used for the duration of a job
- Only ODL and ONAP are included for now, as their standard tooling provides the best coverage. We are looking into ways to include more projects in the future.
