LFN IT Summary - Mar 2021

Job costs

February

March

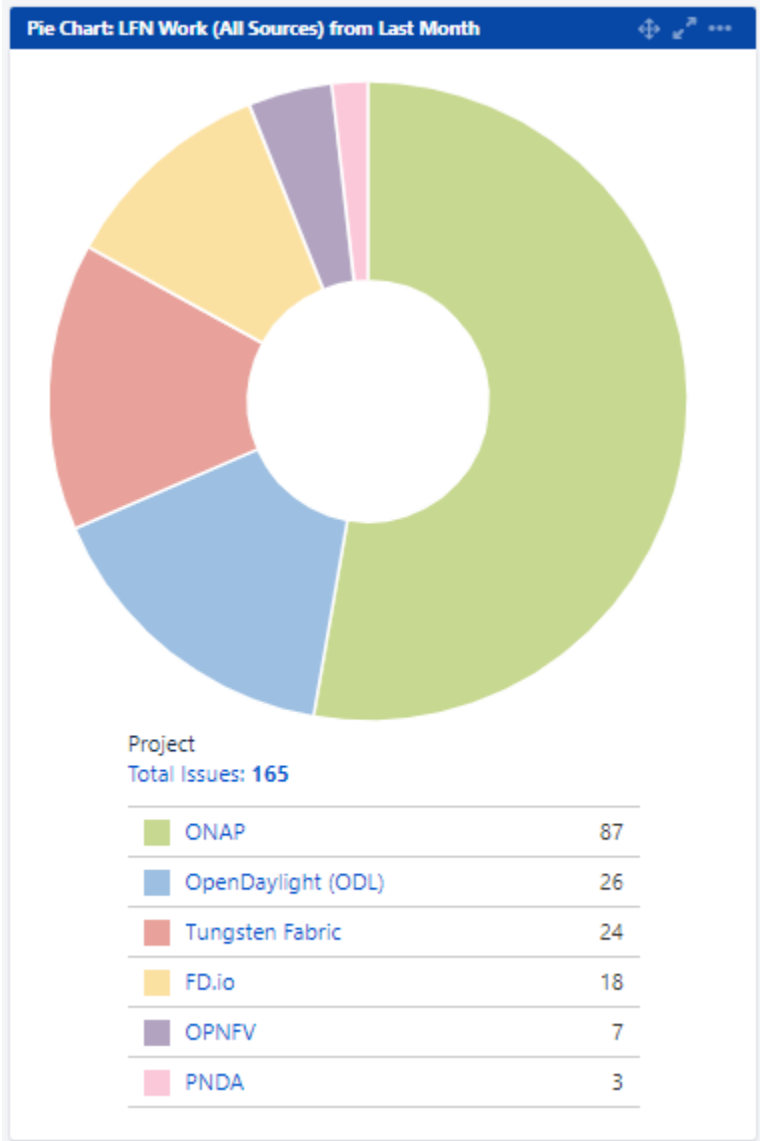

Key Takeaways:

- We discovered an error in the pricing API from our cloud vendor which has caused all the cost data associated with ODL to come back as \$0 even though it is being charged. The reason for this is that ODL has moved to the latest generation of instances which are cheaper but the pricing API is giving us no data for some reason. We've raised an issue with the vendor about it. Once the API is fixed we'll try to back-fill data as best we can from the rest of data we have. Additionally, we found that this affects the data from February and is why ODL was so significantly less as they transitioned to the new instances in mid-February
- Notes:
 - Job counts are an indication of how much change happened to the code bases
 - Total costs are based on cost data returned from cloud compute resources used for the duration of a job
 - Only ODL and ONAP are included for now, as their standard tooling provides the best coverage. We are looking into ways to include more projects in the future.
