

ONAP vFWCL debug Guide

- Pre-requisite

Setup the Kubernetes environment by OOM.

- Create a service in SDC

- Instantiate a service

TBD

- Preload SDNC

- vPKG Preload Request CURL

```
curl --location --request POST '10.12.26.59:12829/
restconf/operations/VNF-API:preload-vnf-topology-
operation' \
--header 'Authorization: Basic

vFWCL APPC Closed Loop Debug

After opening the network between vPKG → vFW → vSINK, observe the network traffic graph by accessing the DarkStat interface.

To log in, execute the following command through Terminal, enter the password, and after successful access to the browser visit <http://localhost:26667>

```
ssh -N -L 26667:172.31.178.154:667 -f root@172.29.167.173
```

When the vFWCL closed-loop policy does not take effect, the network traffic graph is as shown in the figure below

Verify section

```
curl -X GET \  
http://localhost:30227/events/  
unauthenticated.SEC_MEASUREMENT_OUTPUT/group1/C1 \  
-H 'Accept: application/json' \  
-H 'Content-Type: application/cambria'
```

```
curl -X GET \  
http://localhost:30227/events/unauthenticated.DCAE_CL_OUTPUT/  
group1/C1 \  
-H 'Accept: application/json' \  
-H 'Content-Type: application/cambria'
```

Query section

```
curl -X GET \
http://10.96.205.45:8443/aai/v16/network/generic-vnfs/ \
-H 'Accept: application/json' \
-H 'Authorization: Basic QUFJOkFBSQ==' \
-H 'Content-Type: application/json' \
-H 'X-FromAppId: Postman' \
-H 'X-TransactionId: get_generic_vnf'
--insecure
```

Create a NETCONF mount point

- Approach 1

```
curl -X PUT \
      http://10.12.26.60:30230/restconf/config/network-
      topology:network-topology/topology/topology-netconf/node/9d8893f4-
      f158-451a-9828-46dfc610de71 \
      -H 'Accept: application/xml' \
      -H 'Authorization: Basic
YWRtaW46S3A4Yko0U1hzek0wV1hsaGFrM2VlbGNzZTJnQXc4NHZ
hb0dHbUp2VXkyVQ==' \
      -H 'Content-Type: text/xml' \
      -d '<node
xmlns="urn:TBD:params:xml:ns:yang:network-topology">
<node-id><vnf-id></node-id>
<host xmlns="urn:opendaylight:netconf-node-
topology">172.31.178.150</host>
<port xmlns="urn:opendaylight:netconf-node-
topology">2831</port>
<username xmlns="urn:opendaylight:netconf-node-
topology">admin</username>
<password xmlns="urn:opendaylight:netconf-node-
topology">admin</password>
<tcp-only xmlns="urn:opendaylight:netconf-node-
topology">false</tcp-only>
</node>'
```

- Approach 2 (✓)

```
curl -v --noproxy '*' --user
"admin":"Kp8bJ4SXszM0WXlhak3eHlcse2gAw84vaoGGm
JvUy2U" -d @netconf-mount-template.xml -H "Accept:
application/xml" -H "Content-type: application/xml" -X PUT
--trace trace.out http://10.12.26.60:30230/restconf/config/
network-topology:network-topology/topology/topology-
netconf/node/9d8893f4-f158-451a-9828-46dfc610de71
```

Verify the NETCONF mount point

```
curl -X GET \
```

```
http://10.108.131.179:8282/restconf/operational/network-
topology:network-topology/topology/topology-netconf/node/9d8893f4-
f158-451a-9828-46dfc610de71 \
-H 'Accept: application/json' \
-H 'Authorization: Basic
YWRTaW46S3A4Yko0U1hzek0wV1hsaGFrM2VlbGNzZTJnQXc4NHZ
hb0dHbUp2VXkyVQ==' | python3 -m json.tool | less
```

Get the current streams being active in vPKG

```
curl -X GET \
```

```
http://10.108.131.179:8282/restconf/config/network-
topology:network-topology/topology/topology-netconf/node/9d8893f4-
f158-451a-9828-46dfc610de71/yang-ext:mount/stream-count:stream-
count \
-H 'Accept: application/json' \
```

-H 'Authorization: Basic

```

"streams": {

"active-streams": 5

}

}

}

When the vFWCL closed-loop policy is in effect, the network traffic graph should look like this

vFWCL Policy Debug

Steps of vFW test

The vFW test is divided into:

Create Policy type -> change Policy group to ACTIVE -> push policy -> match policy -> verify AAI query

Policy type creation

- Policy creation

```
curl -v --silent -k --user 'healthcheck:zb!XztG34' -X POST "https://10.105.52.228:6969/policy/api/v1/policytypes" -H "Accept: application/json" -H "Content-Type: application/json" -d @policy_type.json
```

```
root@k8s-node1:~/policy-debug# cat policy_type.json
```

```
{  
    "name": "ToscaServiceTemplateSimple",  
    "policy_types": {  
        "onap.policies.controlloop.Operational": {  
            "derived_from": "tosca.policies.Root:0.0.0",  
            "description": "Operational Policy for Control Loops",  
            "metadata": {},  
            "name": "onap.policies.controlloop.Operational",  
            "properties": {},  
            "version": "1.0.0"  
        }  
    "tosca_definitions_version": "tosca_simple_yaml_1_0_0",  
    "version": "1.0.0"  
}
```

- Policy query

```
curl -vvv --silent -k --user 'healthcheck:zb!XztG34' -X GET "https://
10.105.209.215:6969/policy/pap/v1/pdps" -H "Accept: application/
json" -H "Content-Type: application/json" | python -m json.tool

```

- AAI verification query

Policy will call the following AAI api to obtain the vserver's reducelink, and then call the corresponding connection to obtain the execution result.

Query the resource-link called by AAI:

```

curl --location --request GET 'https://
aai.api.sparky.simpledemo.onap.org:30233/aai/v16/search/nodes-
query?search-node-type=vserver&filter=vserver-
name:EQUALS:zdfw1fwl01fwl01' \
--header 'Content-Type: application/json' \
--header 'Authorization: Basic QUFJOkFBSQ==' \
--header 'X-FromAppId: jimmy-postman' \
--header 'Accept: application/json' \
--header 'X-TransactionId: 9999'

```

Return result should like:

```
{
  "result-data": [
    {
      "resource-type": "vserver",
      "resource-link": "/aai/v16/cloud-infrastructure/cloud-regions/cloud-region/CMCC/RegionOne/tenants/tenant/c39bad9117904e71b523c5f9ed012af4/vservers/vserver/8e15d696-c36b-4512-9387-741dc02f552a"
    }
  ]
}
```

- Trouble-Shooting

Solution:

Replacing the certificate, the solution given by the community, replacing these configurations and repackaging, deployment can solve:

<https://gerrit.onap.org/r/c/oom/+/107265> <https://gerrit.onap.org/r/c/oom/+/105913>

- Policy DefaultGroup State

In the push strategy, the following error is reported. Finally, it is found that the DefaultGroup State state is incorrect, and the State state can be modified.

Excuting an order:

```
curl -vvv --silent -k --user 'healthcheck:zb!XztG34' -X POST "https://10.105.209.215:6969/policy/pap/v1/pdps/policies" -H "Accept: application/json" -H "Content-Type: application/json" -d @vfwcl.push.json
```

[vi vfwcl.push.json](#)

```
{
  "policies": [
    {
      "policy-id": "operational.modifyconfig",
      "policy-version": "1.0.0"
    }
  ]
}
```

Response Error like:

```
{
    "errorDetails": "policy not supported by any PDP group:
operational.modifyconfig 1.0.0"
}
```

Querying the status of the PDP group is PASSIVE. According to the official documentation, he will refuse all implementation strategies.

Change PASSIVE to ACTIVE state:

```
curl -vvv --silent -k --user'healthcheck:zb!XztG34' -X PUT "https://
10.105.209.215:6969/policy/pap/v1/pdps/groups/defaultGroup?state=ACTIVE"
-H "Accept: application/json" -H "Content-Type: application/json"
```

- Policy mismatch

The actual findings received from the network.log DCAE that the closedLoopControlName and the configured Policy are inconsistent, resulting in a mismatch.

```
{"closedLoopEventClient":"DCAE_INSTANCE_ID.dcae-
tca","policyVersion":"v0.0.1","policyName":"DCAE.Config_tca-hi-
lo","policyScope":"DCAE","target_type":"VM","AAI":{"vserver.vserver-
name":"zdfw1fwl01fwl01"},"closedLoopAlarmStart":158892618519973
9,"closedLoopEventStatus":"ONSET","closedLoopControlName":"Con-
trolLoop-vFirewall-d0a1dfc6-94f5-4fd4-
a5b5-4630b438850a","version":"1.0.2","target":"vserver.vserver-
name","requestID":"c1e58beb-a2b0-45bf-
b69d-758b91f91a79","from":"DCAE"}
```

From the telemetry query, we see:

```
{"closedLoopControlName": "ControlLoop-vFirewall-135835e3-
eed7-497a-83ab-8c315f37fa4a",...}
```

However, at this time, the closedLoopControlName of the Policy query result is inconsistent, so that subsequent Policy policies cannot be matched and triggered.
