

Documentation guide improvements

Sofia Wallin, Ericsson Software Technology and Eric Debeau, Orange

ONAP Documentation guide

- As part of the Guilin release the documentation team will make an effort to improve the [documentation guide](#).
- An [Epic in Jira](#) has been created to track the work and we will continuously work with this throughout the release.

As part of this session we would like to prioritize, create associated tasks and plan the work forward.

Notes/feedback

- Plugin for RST files with support for formatting (eclipse uses one as an example)
- Using tox to generate locally, needs to be added to the guide
- To have some kind of intro section for building docs would be helpful
- Creating diagrams in a consistent way (use clamp as an example?) plantuml could be a potential tool.
- Using Redoc for API documentation rendering

The feedback given will be brought to the team for assessment and further discussion.

The doc team welcomes feedback, support and questions. Our weekly meeting is every Thursday at 13:00 UTC.
