

Meld Release Process Proposal

Release Process Proposal

- › Use the release process currently used by OPNFV
- › Focus of releases will be on supporting RA and RI requirements
- › Introduce the idea of “managed” and “self-managed” projects
 - › Managed projects will follow the release requirements and the release cadence
 - › Self-Managed projects have no specific requirements. They may participate in releases if they provide their distribution, release notes, installation instructions, and other documentation in accordance with the TSC approved release schedule.
 - › ALL existing projects will initially be managed projects. Likewise, new projects will be managed.
 - › Projects may make a request to the TSC to become self-managed projects **IF** they are not a dependency for implementing RA/RI requirements.
 - › Likewise, self-managed projects may make a request to the TSC to become managed projects
 - › Managed projects may not have a dependency on self-managed projects. If they do, then the project that is a dependency must become a managed project
