Thoth Action Plan for Collaborative Innovation of Network Intelligence

Lei Huang(CMCC)

Yan Yang(CMCC)

Sridhar Rao(LF)

Anti-Trust Policy Notice

- Linux Foundation meetings involve participation by industry competitors, and it is the intention of the Linux Foundation to conduct all of its activities in accordance with applicable antitrust and competition laws. It is therefore extremely important that attendees adhere to meeting agendas, and be aware of, and not participate in, any activities that are prohibited under applicable US state, federal or foreign antitrust and competition laws.
- Examples of types of actions that are prohibited at Linux Foundation meetings and in connection with Linux Foundation activities are described in the Linux Foundation Antitrust Policy available at <http://www.linuxfoundation.org/antitrustpolicy>. If you have questions about these matters, please contact your company counsel, or if you are a member of the Linux Foundation, feel free to contact Andrew Updegrove of the firm of Gesmer Updegrove LLP, which provides legal counsel to the Linux Foundation.

- **Mission:**
 - AI has potential in creating value in terms of enhanced workload availability and improved performance and efficiency for NFV usecases. This work aims to build machine-Learning models and Tools that can be used by Telcos (typically by the operations team in Telcos).
 - This project also aims to define set of data models for each of the decision making problems, that will help both provider and consumer of the data to collaborate.
- **Problem:** Lack of operator scenarios and data, also lack of ecological collaboration mechanism
- **Follow-up:** From 2022, we introduce Network Intelligent Collaborative Innovation Project in Thoth, gather R&D resources in Telcos, IT, academia, etc. pull together industry to jointly build network intelligence use cases.

- **Thoth Introduction**
 - Network Intelligent Collaborative Innovation Project
 - Other works in Thoth Moselle Release
- Panel-Thinking about Network Intelligent Collaborative Innovation

Background-Introduction of Intelligent Networking

- **What is Intelligent Networking?**

-A network empowered by AI technologies and systematic integration of AI and communication network on hardware, software, systems and processes to realize lower cost, higher efficiency and agile business.

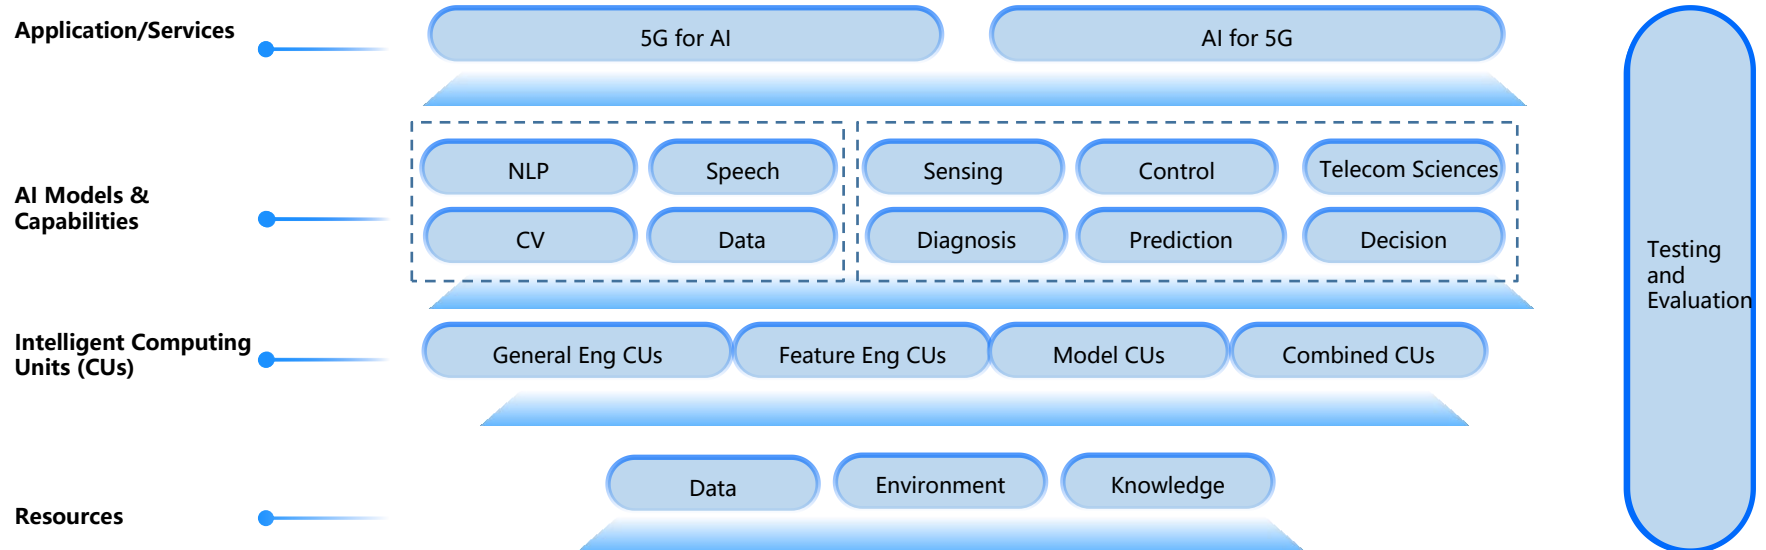

- **What is Intelligent Networking Ecosystem?**

-Through open source and standards organizations, jointly build intelligent network ecosystem, share network intelligent R&D resources, define industry standards, and provide open source reference implementations.

Action for Building Intelligent Network Ecosystem

- The current bottleneck problems of network intelligence technology include data, algorithms, etc.
- In order to solve these problems, LFN Board Chair -Dr. Junlan Feng proposed at LFN ONEEF that it is better to connect industry organizations in LFN, establish joint working group for open source network innovation.

Action for Building Intelligent Network Ecosystem- Network Intelligent Collaborative Innovation Project (1/1)

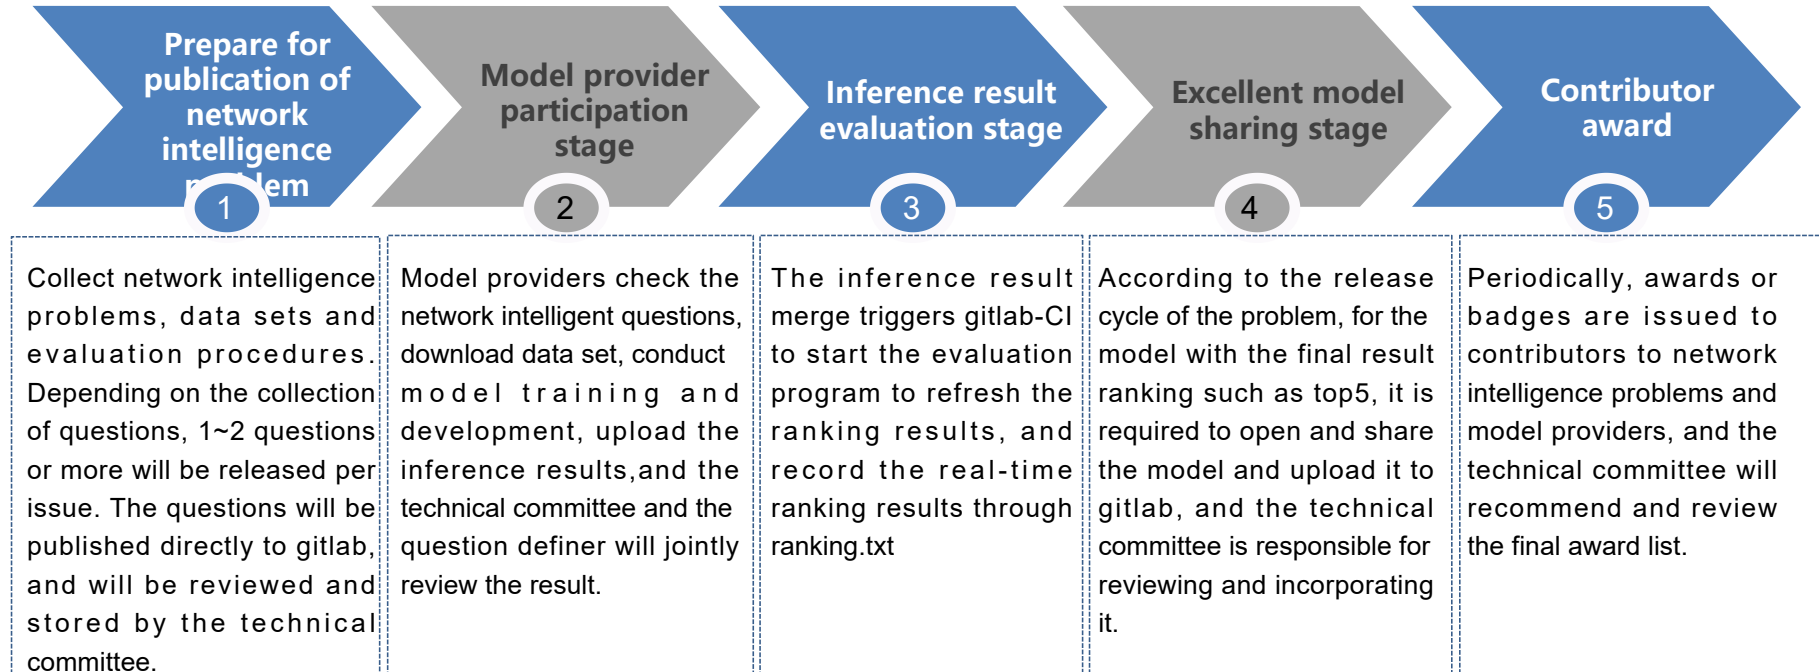

- **Goal:** Gather operators, vendors, research institutions, etc. to share model scenarios and data/R&D resources according to common network intelligence requirements of industry, jointly construct network intelligence algorithm models, then create network intelligence collaborative innovation ecosystem.
- **Project Form:** Taking the form of AI competition for reference, **operators** put forward requirements for network intelligence scenarios, then **researchers**(include vendors, IT companies,etc.) conduct R&D and submission of AI models based on scenario requirements.
- **Project Works**
 - (1) Platform: Used to submit, store and maintain network intelligence scenario description files, data, and models
 - (2) Use case scenario: Collect and review network intelligence scenario requirements
 - (3) Model: Network intelligence scenario model R&D
 - (4) Data: Network intelligence dataset construction
 - (5) Evaluation: Network intelligence scenario model evaluation and ranking

- **Project Implementation Plan/Process**

1. Kickoff work for the project, including community reporting, contribution recruitment, platform development, marketing promotion, etc.
2. Requirements collection of Network Intelligent Collaborative Innovation Project
3. Project technical committee reviews use case scenario requirements, and pushes the approved scenario requirements to be launched and publicized
4. Researchers/developers develop and submit algorithm models based on the use case scenario requirements
5. Models evaluation and ranking, finally publish models ranking list
6. In addition to project implementation process, Thoth conducts daily operation and maintenance of platform, data, etc.

Project Organization Process Design

Five stages to advance project operation and cycle iterations

Project Design Based on Gitlab(1/2)

- **Design goal:** Minimize project maintenance costs and achieve the core goal of collaborative innovation ecosystem construction (sharing and building typical scenarios, data sets and algorithm models)
- **Design scheme:** build a network intelligent collaborative innovation project platform based on gitlab

Role

✓ Problem definer: Contribute questions, data, evaluation procedures and related instructions

✓ Model provider: Download data and upload inference results, and contribute model code according to the evaluation ranking

✓ Reviewer: Responsible for reviewing the uploaded content, (Virtual or newly formed community technical committee teams)

Grouping suggestion in gitlab

Project Design Based on Gitlab(2/2)

Project suggestion in gitlab

- Problem Definition Project
(Problem definer group)

```
-Dummy resource compliance detection
  description.txt
- dataset
  archive.zip
  description.txt
- evaluation
  description.txt
  evaluation.py
```

- Each network intelligence problem is maintained as a separate project
- Dataset storage requires additional external storage

- Model Sharing Project
(Model solution provider group)

```
-01-Dummy resource compliance detection
  -results
    -play1ID
      sequence_predict_result.csv
    -play2ID
      sequence_predict_result.csv
  -topModel
    -01-playerID
      model.py
    -02-playerID
      model.py
-02-NFV log exception analysis
  -results
    -play1ID
      sequence_predict_result.csv
    -play2ID
      sequence_predict_result.csv
  -topModel
    -01-playerID
      model.py
    -02-playerID
      model.py
```

- results: inference result submission directory
- topModel: excellent model sharing and storage directory

- Model ranking project
(Reviewer group)

```
-Dummy resource compliance detection
  ranking.txt
-NFV log exception analysis
  ranking.txt
```

- ranking.txt stores model real-time ranking
- The inference result merge operation triggers gitlab-ci to refresh the ranking in real time

Project Timeline

- Project kickoff
- Propose in opensource communities
- Project construction and operation

Jun 13-16,2022

- Form project Technical Committee
- Scenario requirements ,resources collection and review

Mid-Jul

Project will be progressing normally

May,2022

Introduce project in LFN DTF

Jul

- Open network intelligent collaborative innovation project platform
- Online Scenario Requirements
- R&D collection and launch

- **Join project Technical Committee**
- **Provide network intelligence use case scenario requirements**
- **Develop network intelligence use case scenario model**
- **Contribute to project operation and maintenance**

Join project Technical Committee

- **Work:** The Technical Committee of Network Intelligent Collaborative Innovation Project is responsible for pre-release review of network intelligence scenario requirements, include but not limited to-
 1. Whether the scenario requirements are sufficient and reasonable;
 2. Whether the scenario relevant R&D resources are complete, including data resources, evaluation scripts, etc.
- **Condition:** Experts of Technical Committee should satisfy one of the following conditions-
 1. AI related work experience;
 2. Deep experience in network technology.
- **Recruitment Scope:** LF communities, including but not limited to LFN, LF AI, etc.

Provide Network Intelligence Use Case Scenario Requirements

- **Work:** Provide network intelligence use case scenario requirements, and responsible for relevant resources required for scenario model development
- **Condition:** Network intelligence use case scenario should have following contents, which will be released on the project platform after being reviewed and approved by project Technical Committee-
 1. Use case scenario description;
 2. Data resources;
 3. Code specification;
 4. Model evaluation script
- **Recruitment Scope:** LF communities, mainly from operators, including but not limited to LFN EUAG, etc.

Develop Network Intelligence Use Case Scenario Model

- **Work:** Responsible for R&D of algorithm models and submit model results based on network intelligence use case scenario requirements
- **Condition:** According to network intelligence use case scenario requirements, follow code specifications, and submit model results to the project platform
- **Recruitment Scope:** LF communities, including but not limited to LFN, LF AI, etc.

- **Work:** Become a contributor to Anuket Thoth project, responsible for operation and maintenance of the network intelligent collaborative innovation project, work includes-
 - 1.Operation and maintenance for Network intelligent collaborative innovation project platform
 - 2.Network intelligence scenario requirements management
 - 3.Network intelligence dataset construction
 - 4.Network intelligence scenario model evaluation
- **Recruitment Scope:** Contributors will be recruited from LFN according to LFN project management regulations. Relevant work has been started, wiki page shown as follows
<https://wiki.anuket.io/display/HOME/Network+Intelligent+Collaborative+Innovation+Project-+Call+for+Contributions>

- **Thoth Introduction**
 - Network Intelligent Collaborative Innovation Project
 - **Other works in Thoth Moselle Release**
- Panel-Thinking about Network Intelligent Collaborative Innovation

- VM Failure Prediction Models (LSTM and its variations, CNN and decision tree).
- Tools
 - AlgoSelector: Interactive tool to suggest the best AI/ML model to start with.
 - Data Extractor: Prometheus.
- Research Studies
 - Observability Data Generation using GANs (ITU-Competition)
 - AI/ML Problems in NFV
 - Opensource Tools for AI/ML in NFV

- Model:
 - Log Analysis.
 - Intern and Student Volunteer
 - Observability Data Generation using GANs
 - Intern and ITU-Competition
- Framework:
 - Kubeflow.
 - Student Volunteer
 - Include Algoselector-Models.
- Tools
 - Data Extractor.

Panlists Introduction

Lei Huang

Thoth PTL, Researcher in
CMCC AI and Intelligent
Operation R&D Center

Yan Yang

CVC Vice-chair, Senior
Researcher in CMCC AI and
Intelligent Operation R&D
Center

Beth Cohen

EUAG Chair, Anuket TSC Co-chair,
Verizon SDN Network Product
Strategy

Mehmet Toy

Mehmet Toy
ITU-T 13 Project Chair, Verizon

Sridhar K. N. Rao

LF Senior Architect, research
interests include next-generation
wired and wireless networking,
use of ML in Networking

Ranny Haiby

LF Technical CTO, works with
open source Networking and
Edge projects under the Linux
Foundation

Zhipeng Huang

LF AI TAC Member, Director of Open Source
for Huawei Compute product line covering
Operating System, Database and Artificial
Intelligence

Scot Steele

Anuket TSC Member, Microsoft Senior
Program Manager, working on the Azure
for Operators - Network Cloud project

Welcome Participation

- Contact : huangleiyjy@chinamobile.com
- Thoth Weekly Meeting Time: Every week on Friday, 1300 UTC
