About the CNF Certification Program

The Cloud Native Network Function (CNF) Certification Program **provides confidence** for Communication Service Providers (CSPs) that applications provided by their vendors demonstrate cloud native best practices.

“It is important to adopt cloud native best practices as we evolve to achieve our goals for agility, automation, and optimization. The CNF Certification is a great tool with which we can measure and drive cloud native practices across our platforms and network functions.”

*Tom Kivlin, principal cloud architect at **Vodafone***

How to Earn “Certified CNF” Status

- Start on cncf.io/cnf
- Meet eligibility criteria
 - Terms & Conditions
 - Participation form
 - Technical requirements
- Run certification tests
 - CNF Certification [instructions](#)
- Submit results
 - Create a [pull request](#)
- Promote
 - Landing page and landscape
 - Certified CNF mark

cncf.io/cnf

- **Is CNF Certification per company or per product?**
 - Per product (no limit)
 - One participation form per product

- **What is the cost of certification?**
 - No charge for CNCF members
 - No charge for non-profit organizations
 - Same fee as [joining](#) CNCF for other commercial organizations

The background of the slide is a close-up, shallow depth-of-field photograph of a golden wheat field. The wheat stalks are in sharp focus in the foreground, while the background is softly blurred, creating a warm, sunlit atmosphere.

CNF Certification
powered by
CNF Test Suite

Steps to run the testsuite

1. Download the testsuite on GitHub from [cnfc/cnf-testsuite](https://github.com/cnfc/cnf-testsuite)
2. `$ cnf-testsuite setup`
3. Create a configuration file
4. Install CNF: `$ cnf-testsuite cnf_setup`
5. Run the tests: `$ cnf-testsuite cert`

 [Quick install command & usage](#)

Setup the testsuite

```
$ ./cnf-testsuite setup
Successfully created directories for cnf-testsuite
Global helm found. Version: v3.8.2
No Local helm version found
Global kubectl found. Version: 1.20
Global kubectl client is more than 1 minor version ahead/behind server version
No Local kubectl version found
Global git found. Version: 2.17.1
No Local git version found
All prerequisites found.
cnf-testsuite namespace already exists on the Kubernetes cluster
Setup complete
$
```

Create a CNF Configuration File

```
---  
  
release_name: hello-coredns  
  
helm_repository:  
  name: stable  
  repo_url: https://cncf.gitlab.io/stable  
  
helm_chart: stable/coredns
```

 [Other configuration options](#)

Install the CNF

```
cnf-testsuite cnf_setup cnf-config=./cnf-testsuite.yml
```

```
$ ./cnf-testsuite cnf_setup cnf-config=./cnf-testsuite.yml
Successfully created directories for cnf-testsuite
cnf-testsuite namespace already exists on the Kubernetes cluster
cnf setup online mode
Successfully setup hello-coredns
cnf setup online mode complete
$
```

Running the cert command

```
$ ./cnf-testsuite cert
```

Microservice Tests

```
✓ PASSED: Image size is good 🐛 ⚖️  
✓ PASSED: CNF had a reasonable startup time 🚀  
✓ 🏆 PASSED: Only one process type used 🐛 ⚖️  
✓ ✨ PASSED: Some containers exposed as a service 🐛 ⚖️  
▶▶ SKIPPED: [shared_database] No MariaDB containers were found  
Microservice results: 4 of 5 tests passed
```

Reliability, Resilience, and Availability Tests

```
✓ ✨ PASSED: pod_network_latency chaos test passed 💀 ♻️  
✓ ✨ PASSED: pod_network_corruption chaos test passed 💀 ♻️  
✓ PASSED: disk_fill chaos test passed 💀 ♻️  
✓ PASSED: pod_delete chaos test passed 💀 ♻️  
✓ PASSED: pod_memory_hog chaos test passed 💀 ♻️  
✓ ✨ PASSED: pod_io_stress chaos test passed 💀 ♻️  
▶▶ ✨ SKIPPED: pod_dns_error docker runtime not found 💀 ♻️  
✓ ✨ PASSED: pod_network_duplication chaos test passed 💀 ♻️  
✓ 🏆 PASSED: Helm liveness probe found 🍷  
✓ 🏆 PASSED: Helm readiness probe found 🍷  
Reliability, resilience, and availability results: 9 of 9 tests passed
```

RESULTS SUMMARY

- 36 of 43 total tests passed
- 12 of 14 essential tests passed

Results have been saved to results/cnf-testsuite-results-20221020-085042-512.yml
