# VNF Requirement extension for PNF

- [VNFRQTS-506](#): [Supporting PNF package onboarding](#)
  - [VNFRQTS-507](#): Project scope to include **PNF**
  - [VNFRQTS-508](#): Add **PNFD** requirements
  - Section 5.1.6:
    - [VNFRQTS-499](#): **PNF** onboarding CSAR package structure based SOL004
    - [VNFRQTS-497](#): Adding package security requirements
  - Section 7.2:
    - Clarifications on the documentation requirements
    - [VNFRQTS-505](#): **PNF** onboarding package artifacts
    - [VNFRQTS-498](#): Add VES Event Registration requirement to **PNF** package
    - Clarifications on artifacts structure requirements
    - [VNFRQTS-496](#): supporting Ansible protocol in **PNF**

# ONAP VNF Descriptor (5.1.9) Requirements

R number	Description	Comments
<a href="#">R-35854</a>	The VNF Descriptor (VNFD) provided by VNF vendor <b>MUST</b> comply with TOSCA/YAML based Service template for VNF descriptor specified in ETSI NFV-SOL001.	Shall applicable to PNFD
<a href="#">R-65486</a>	The VNFD <b>MUST</b> comply with ETSI GS NFV-SOL001 document endorsing the above mentioned NFV Profile and maintaining the gaps with the requirements specified in ETSI GS NFV-IFA011 standard.	Shall applicable to PNFD
<a href="#">R-17852</a>	The VNFD <b>MAY</b> include TOSCA/YAML definitions that are not part of NFV Profile. If provided, these definitions <b>MUST</b> comply with TOSCA Simple Profile in YAML v.1.2.	Shall applicable to PND
<a href="#">R-46527</a>	A VNFD is a deployment template which describes a VNF in terms of deployment and operational behavior requirements. ... including topology, deployment aspect, and VNF lifecycle management (LCM) operations	PNF LCM is not defined yet
<a href="#">R-15837</a>	The major TOSCA Types specified in ETSI NFV-SOL001 standard draft	
<a href="#">R-54356</a> <a href="#">R-54876</a>	VNF Data Types	CpProtocolData AddressData L2AddressData L3AddressData LocationInformation CivicAddressElement
<a href="#">R-67895</a>	VNF Capability Types	VirtualLinkable
<a href="#">R-95321</a>	VNF Relationship Types	VirtualLinksTo
<a href="#">R-32155</a>	VNF Interface Types	
		PNF Node Types: PNF, PnfExtCp, Cp
		PBF Policy Types

# ONAP VNF CSAR Package (5.1.6) Requirements

R number	Description	Comments
<a href="#">R-51347</a>	The VNF package <b>MUST</b> be arranged as a CSAR archive as specified in TOSCA Simple Profile in YAML 1.2.	Shall applicable to PNF package
<a href="#">R-87234</a>	The VNF package provided by a VNF vendor <b>MAY</b> be either with TOSCA-Metadata directory (CSAR Option 1) or without TOSCA-Metadata directory (CSAR Option 2) as specified in ETSI GS NFV-SOL004. On-boarding entity (ONAP SDC) must support both options. <b>Note:</b> SDC supports only the CSAR Option 1 in Casablanca. The Option 2 will be considered in future ONAP releases,	Shall applicable to PNF package
<a href="#">R-10087</a>	The VNF package <b>MUST</b> contain all standard artifacts as specified in ETSI GS NFV-SOL004 including Manifest file, VNFD (or Main TOSCA/YAML based Service Template) and other optional artifacts. CSAR Manifest file as per SOL004 - for example ROOT\ <b>MainServiceTemplate.mf</b>	Shall applicable to PNF package
<a href="#">R-01123</a>	The VNF package Manifest file <b>MUST</b> contain: VNF package meta-data, a list of all artifacts (both internal and external) entry's including their respected URI's, an algorithm to calculate a digest and a digest result calculated on the content of each artifacts, as specified in ETSI GS NFV-SOL004. The VNF Package <b>MUST</b> include VNF Identification Data to uniquely identify the resource for a given VNF provider. The identification data must include: an identifier for the VNF, the name of the VNF as was given by the VNF provider, VNF description, VNF provider, and version.	Shall applicable to PNF package With new valid names/values <ul style="list-style-type: none"> <li>- pnf_provider_id</li> <li>- pnf_product_name</li> <li>- pnf_release_date_time</li> <li>- pnf_package_version</li> </ul>
<a href="#">R-21322</a>	The VNF provider <b>MUST</b> provide their testing scripts to support testing as specified in ETSI NFV-SOL004 - Testing directory in CSAR	Should applicable to PNF package
<a href="#">R-26885</a>	The VNF provider <b>MUST</b> provide the binaries and images needed to instantiate the VNF (VNF and VNFC images) either as: <ul style="list-style-type: none"> <li>• Local artifact in CSAR: ROOT\Artifacts\<b>VNF_Image.bin</b></li> <li>• externally referred (by URI) artifact in Manifest file (also may be referred by VNF Descriptor)</li> </ul> Note: Currently, ONAP doesn't have the capability of Image management, we upload the image into VIM/VNFM manually.	May applicable to PNF package Not supported with current release
<a href="#">R-40820</a>	The VNF provider <b>MUST</b> enumerate all of the open source licenses their VNF(s) incorporate. CSAR License directory as per ETSI SOL004. for example ROOT\Licenses\ <b>License_term.txt</b>	May applicable to PNF package
R-xxxxx	<b>VNF Package Authenticity</b>	May applicable to PNF package

# PNF on-boarding requirements (7.2)

R number	Description	Comments
<a href="#">R-77707</a>	The <b>xNF provider MUST</b> include a Manifest File that contains a list of <b>all</b> the components in the <b>xNF package</b>	<a href="#">OK</a> . Overlapped with <a href="#">R-10087</a> in section 5.1.6.3
<a href="#">R-66070</a>	The xNF Package <b>MUST</b> include xNF Identification Data to uniquely identify the resource for a given xNF provider. The identification data must include: an identifier for the xNF, the name of the xNF as was given by the xNF provider, xNF description, xNF provider, and version.	Part of the descriptor
<a href="#">R-98617</a>	The xNF provider <b>MUST</b> provide information regarding any dependency (e.g., affinity, anti-affinity) with other xNFs and resources.	Part of the descriptor
<a href="#">R-22346</a>	The VNF package <b>MUST</b> provide VES Event Registration for all VES events provided by that xNF.	VES event Registration Should be applicable to PNF
<a href="#">R-89571</a>	The xNF <b>MUST</b> support and provide artifacts for configuration management using at least one of the following technologies; a) Netconf/YANG, b) Chef, or c) Ansible.	
<a href="#">R-30278</a>	The xNF provider <b>MUST</b> provide a Resource/Device YANG model as a foundation for creating the YANG model for configuration. This will include xNF attributes/parameters and valid values/attributes configurable by policy.	
<a href="#">R-27711</a>	The xNF provider <b>MUST</b> provide an XML file that contains a list of xNF error codes, descriptions of the error, and possible causes/corrective action	Not the proposed FM dictionary
<a href="#">R-74763</a>	The xNF provider <b>MUST</b> provide an artifact per xNF that contains all of the xNF Event Records supported. The artifact should include reference to the specific release of the xNF Event Stream Common Event Data Model document it is based on. (e.g., <a href="#">VES Event Listener</a> )	VES event Listener
<a href="#">R-35851</a>	The xNF Package <b>MUST</b> include xNF topology that describes basic network and application connectivity internal and external to the xNF including Link type, KPIs, Bandwidth, latency, jitter, QoS (if applicable) for each interface.	Part of the descriptor?
<a href="#">R-26881</a>	The xNF provider <b>MUST</b> provide the binaries and images needed to instantiate the xNF (xNF and VNFC images).	Not supported by Casablanca
<a href="#">R-96634</a>	The xNF provider <b>MUST</b> describe scaling capabilities to manage scaling characteristics of the xNF.	Not supported by PNF
<a href="#">R-04298</a>	The xNF provider <b>MUST</b> provide their testing scripts to support testing.	Testing Requirements.
<a href="#">R-58775</a>	The xNF provider <b>MUST</b> provide software components that can be packaged with/near the xNF, if needed, to simulate any functions or systems that connect to the xNF system under test. This component is necessary only if the existing testing environment does not have the necessary simulators.	
<a href="#">R-85653</a>	The xNF <b>MUST</b> provide metrics (e.g., number of sessions, number of subscribers, number of seats, etc.) to ONAP for tracking every license.	Only if Licensing is needed
<a href="#">R-40827</a>	The xNF provider <b>MUST</b> enumerate all of the open source licenses their xNF(s) incorporate.	
<a href="#">R-85991</a>	The xNF provider <b>MUST</b> provide a universal license key per xNF to be used as needed by services (i.e., not tied to a VM instance) as the recommended solution. The xNF provider may provide pools of Unique xNF License Keys, where there is a unique key for each xNF instance as an alternate solution. Licensing issues should be resolved without interrupting in-service xNFs.	
<a href="#">R-47849</a>	The xNF provider <b>MUST</b> support the metadata about licenses (and their applicable entitlements) as defined in this document for xNF software, and any license keys required to authorize use of the xNF software. This metadata will be used to facilitate onboarding the xNF into the ONAP environment and automating processes for putting the licenses into use and managing the full lifecycle of the licenses.

ETSI (SOL 001, SOL 004, SOL005, SOL 007)

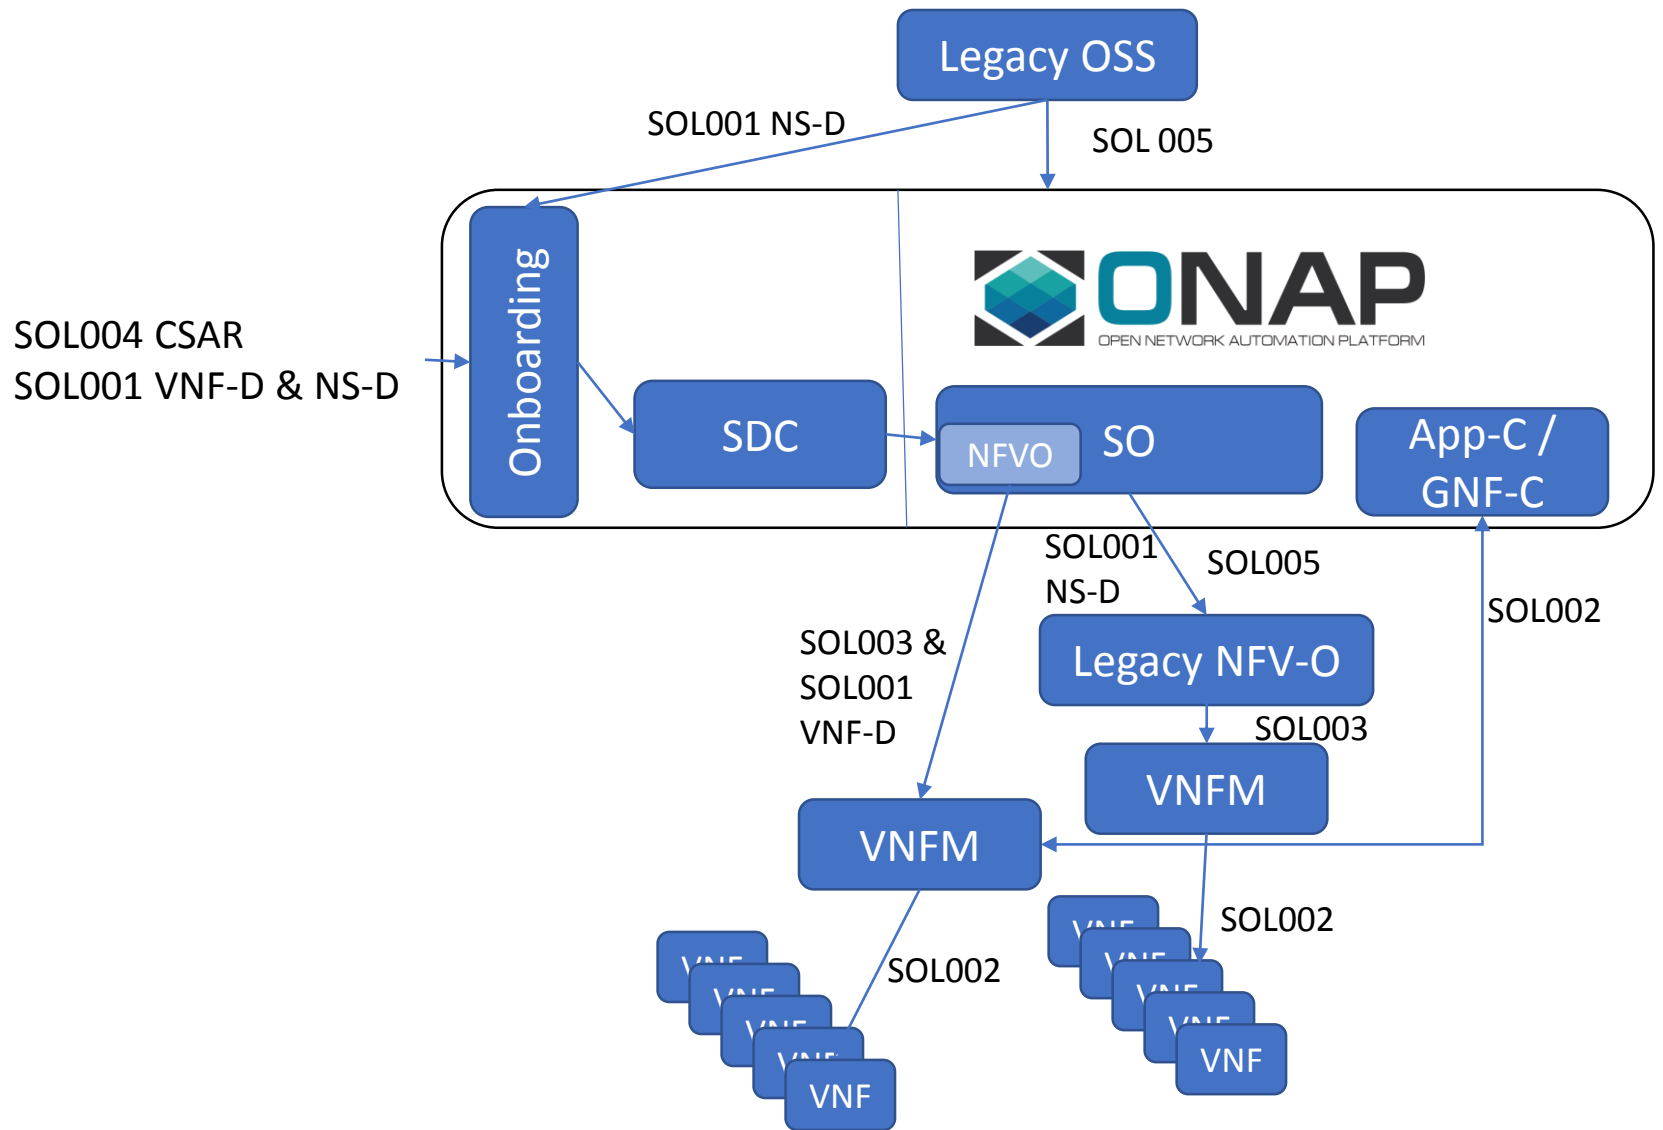

# ETSI SOL Standards

Design Time

Run Time

# ETSI SOL Standards Alignment

# VNFD/PNFD/NSD PROPERTIES ALIGNMENT

On-going ETSI discussion

PNFD	VNFD	NSD	Comments
descriptor_id	descriptor_id	descriptor_id	
version	descriptor_version	descriptor_version	Proposed new name in PNFD: <b>descriptor_version</b>
provider	provider	provider	
name	product_info_name	name	Better to be aligned. Proposed new name in VNFD: <b>name</b>
-	software_version	software_version	<p><b>New in PNFD</b></p> <ol style="list-style-type: none"> <li>1. Better to align with VNFD. VNFD uses <b>software_version</b> for only software change. <b>descriptor_id</b> might be changed only due to descriptor evolution itself like security adding.</li> <li>2. Long-term view, it would be useful to upgrade PNF software.</li> <li>3. It is also useful for service provider to get such information for OAM view like trouble-shooting, service checking, PNF packability checking and so on</li> <li>4. Align with ONAP model</li> </ol>
function_description	product_info_description	-	Proposed new name in VNFD: <b>function_description</b> .
descriptor_invariant_id	product_name	invariant_id	Add <b>function_description</b> into NSD
geographical_location_info	-	-	Proposed new name in VNFD / PNFD: <b>invariant_id</b>

# SOL004 EXPANDED SCOPE OPTION

On-going ETSI discussion

- Tentative updated SOL004 title :  
“Network Functions Virtualisation (NFV) Release 2; Protocols and Data Models; VNF Package specification **and PNF file specification**”
- Tentative updated scope:  
The present document specifies the structure and format of a **VNF** package file and its constituents, fulfilling the requirements specified in ETSI GS NFV-IFA 011 [1] for a VNF package **and in ETSI GS NFV-IFA 014 [x] for a PNFD.**
- Working schedule:

<u>Milestone name</u>	<u>Target date</u>
• CR approval with expanded scope of 2.6.1	2018/12/07
• Functional CRs approved	2018/12/13
• WG approval	2018/12/31
• TB approval	2019/01/31
