Active contributors and community members are welcome to submit a mentorship project proposal for consideration.

Multiple mentors supervising one mentee per project would be desirable as this helps spread the workload and reduce the challenge of coverage caused by working remotely with a mentee in a very different time zone.

The mentor(s) need to be familiar with the project and is/are expected to *directly* supervise the mentee's technical work.

The proposed project needs to be clearly scoped and structured to be suitable for a mentorship project.

The project should be related to one of the current LF Networking projects such as ONAP, ODL, FD.io, Anuket, Tungsten Fabric etc.
