2022-01-12 - ONAP: Stability, Resiliency and Stress tests

Topic Leader(s)
- Morgan Richomme

Topic Description
30m Morgan Richomme
Overview of stability and resiliency tests since Guilin

Topic Overview
S3P (Scalability, Security, Stability and Performance) is a key topic for the ONAP community. On the first releases, stability tests were performed by the integration team at the end of the release. In honolulu stability tests have been automated and integrated in the CI chains, resiliency tests leveraging Litmus chaos framework have been added in Istanbul (node drain tests).

The goal of this session is to give an overview of what has been done so far, the difficulties, the results, the challenges and what is planned in mid longer term in this area.
