2022-06-14 - Virtual: Anuket: Scope of Anuket

Topic Leader(s)
- Gergely Csatari
- João Rodrigues

Topic Description
Let's have a chat about the support of requirements specified in Anuket in upstream open source projects.

Topic Overview
The original mission of Anuket was to help the integration of cloud infrastructures and workloads by defining cloud infrastructure capabilities based on existing open source implementations. This original scope is being extended in two dimensions: there are functionalities added which have no implementation in upstream open source projects and there are features added beyond the scope of workload execution. The approach in Anuket in the first dimension was to add exceptions to the RA documents, but none of these exceptions got resolved. Let's start a discussion on if we would like to address this problem and if yes how. As some of the key contributors of Anuket specifications will not be able to participate in this discussion this should be considered as an informal chat.
