# 2019-03-08 Meeting notes

Date

08 Mar 2019

Attendees

- Casey Cain Thanh Ha (zxiiro) Trevor Bramwell Trishan de Lanerolle user-20f1f Jim Baker Kenny Paul
- Ed Kern Ed Warnicke Brian Freeman Morgan Richomme @chrisC(Att) Jack Morgan @tnadeau   @daniel takamori (pono)

Minutes

Ed Kern previews drone and circleci

- ○
  - ○ circleci uses nomad for orchestrator and doesn't support ARM
  - ○ drone has shared memory constraints and does support ARM
  - ○ a drone server can drive to a nomad cluster
  - ○ used by vpp for ~5years because jenkins on openstack was unstable and at the time any disk writes were slow
  - ○ can link to a ngrok container to get to drone server on other side of firewalls
- After getting more specific numbers, compare the direct costs for leveraging As A Service.
  - ○ Discussion over the "sales phase" for migrations and how do we mitigate concerns
  - ○ fd.io has then issue with infra limitations onap suffers from build/release complexity
  - ○ recount of hydrogen release challenge - never, ever again 🙂
  - ○ Thanh Ha (zxiiro) notes " *If it's any consolation ODL's release process is fairly straight forward these days :)*"
  - ○ Once final numbers are available, the PMs will need to raise the issue with their respective TSCs
  - ○ Would be nice to have everyone on one platform, but each community will no doubt have their own preferences
  - ○ Ed Warnicke talking to gitlab on "bundle and save" - our current projects don't qualify for free
  - ○ Jim Baker at least in onap little appetite for tool chain transitions Brian Freeman notes more timing and "safety"
  - ○ Thanh Ha (zxiiro) ODL transitioned from rackspace to vexxhost a year ago and would not be hip to moving again any time soon. Key concern is migration plan (job migrations), it's not something that can happen over night.
  - ○ Trevor Bramwell notes that it will be unlikely that any transition will be in isolation. Likely to need migrating to a few tools due to dependencies even if communities only want to change one.

Action items

- ☑ user-20f1f to escalate to management for POC payments
- ☑ Kenny Paul add unconference session for TAC toolchain discussion
- ☐
