

ONAP consumption models whitepaper - Similar initiative section

Atul to articulate this section

- 1. Analogy of ONAP with popular initiative as Open Stack
- 2. How Operators got involved
- 3. Role of community
- 4. Will it result in business success specially reduced cost and agility
- 5. Key message , can we prove from history Open can be carrier grade and will work
- 6. Also suggest explain it can work for Telco , Enterprise etc

Something like a timeline chart for 3-4 key open source initiatives (preferably from LF ?), it can have an example of 2 from other streams (how about OpenSource MANO, that is the nearest example ? will this cause issues

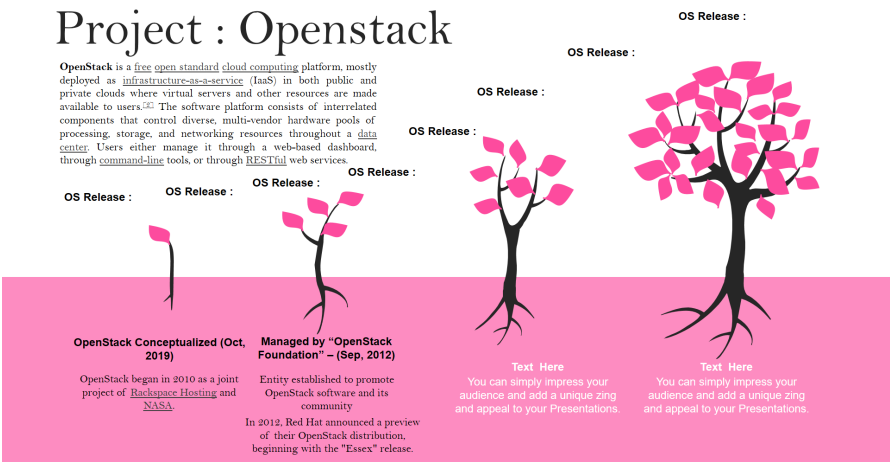

Positioning of ONAP is across two areas (A) Network Automation and (B) Analytics

Corresponding projects in LFN and non LFN family are -

(A) Network Automation : Open Daylight / Tungsten Fabric / Open Stack / OSM

Example Template for OpenStack, expand for all the relevant projects

Put a preface and a post section on relevance of this section, this is key ---- MESSAGE to BRING OUT, HOW & WHEN Adoption STARTED, Ex - 2012, Red Hat Decided to go Distro MODEL

(B) Analytics : PNDA / SANS / Open Source Solutions from Hyper-Scalers
