

Kubernetes Installer Comparison

Features	KubeOne	Kubespray	Kind	Kubeadm	OpenShift Origin	Airship
Declarative Cluster Configuration - describing the K8s cluster including infra components (eg. CRI, CNI), versions, number of nodes (master+worker), architecture, K8s certificates	Y	Y	N	N	Y	Y. Uses Kustomize for layering and substitution.
Templated configuration	Y	Y	N	N	Y	Y. Uses Kustomize
Centralized configuration model	Y	Y	Y	N	Y	Y
Ability to use existing machines (from machine provisioning stage)		Y	Y	Y	Y	TBD. Recognizes the use case of "bring your own OS", but not committed to implementing in v2.0.
Ability to manage underlying infrastructure (i.e. to create and configure nodes for use by a cluster)	Y	N	unknown	N	depends on infra provider	Yes, integrates cluster-api-provider-metal3
Support for different architectures: Arm and x86	Y	N	N	Y	unknown	N. ARM is out of scope for v2.0. Operators are welcome to step up and add the support.
K8s clusters pass conformance test	Y	Y	Y	Y	unknown	TBD, May run internally.
100% open source	Y	Y	Y	Y	Y	Y
Support all CNCF-hosted projects	Y				unknown	Yes. Airship architecture allows users to deploy additional extensions and add-ons. If an extension has Helm charts, it can be optionally added to Airship life cycle management experience.
Support for specific versions of K8s	Y	N	Y	Y	Y	Y
Specific versions of K8s components	Y				Y	Y
etcd	Y	Y	Y	Y	Y	Y
Support for deploying from HEAD / `master` branch of K8s	Y	N	Y	Y	unknown	?
Container runtimes (containerd, cri-o) with specific versions	Y	Y	N	Y	Y	Y, uses cluster api kubeadm provider
Kubernetes add-ons/extensions installation (e.g. CNI, CSI, Service Mesh, Ingress, LB, etc.)		partially				Y
Hybrid Support both VNF and CNF						Y
Customizable - pick and choose what and when to use for installation						Y
