

# Meld Ops/TSC 2020-10-01 Meeting notes

## Date

01 Oct 2020

## Attendees

- [Jim Baker](#) [sunku ranganath](#) [Ulrich Kleber](#) [Al Morton](#) [Georg Kunz](#) [Walter Kozlowski](#) [Anjali Goyal](#) [Scott Steinbrueck](#) [Lincoln Lavoie](#) [Phil Robb](#)

## Goals

- Review action items for operations/TSC
- Discuss all AIs with **MeldOps** tag

## Discussion items

- Proposed converged workflow OR keep separate workflows?
  - CNTT been using github; OPNFV using Gerrit
  - gitlab/gitlab CI is the LF strategic direction
    - Timeframe? POC running in 2020 - decision on wide scale adoption in 2021
      - OPNFV projects StorPerf and Kuberef in proof of concept
  - gitlab has more tools - issue trackers, wiki... - is it gitlab for CI/repos OR more of the tool chain?
    - Jira and Confluence strongly integrated == more value
    - defer supporting tools and just focus on CI/repo management
  - Would it help RI work if the tool chain were the same?
    - RTD workflow the same
    - CI integration is the challenging area
      - OPNFV has sep group managing the CI process
      - gitlab enables each project to manage their own CI tools
    - Merge mindset and issue tracking unification would be helped by common tools
    - How are dependencies tracked from specs to RI code changes?
      - not tracked today
  - Proposal: Continue using current tools and defer any migration to gitlab
    - Elbrus release stay on github - then converge on a common tool chain
    - Is there a short term convergence step?
      - Yes, but that would be a multi-step move (more pain)
    - Directional agreement on converged toolchain - question is on priority
- Define PROPOSAL for the day-in-the-life of the future TSC and discuss the needed operational support (inputs/outputs)
  - Develop a straw-proposal for the TSC workflow and refine as we go
  - OPNFV TSC workflow is largely defined by the charter
  - Communicate back to Org/Gov our dependencies on the operational procedures
    - Who of TSC, how long are secondary decisions
    - OPNFV has the charter and operational procedures, where is the CNTT similar docs?
  - Schedule a separate meeting and propose the TSC operations
    - Start with wiki doc: <https://wiki.lfnetworking.org/x/IBBoAg>
- [sunku ranganath](#) Presented some materials on organizing around areas of interest
  - Operationally - have small working groups that bring together the architects and developer to identify gaps and create plans to address the issues
  - Good taxonomy developed as a work in progress: [MeldOperations-Domains.pptx](#)

## Action items
