## Agenda and Minutes

- Release Planning
  - [CNTT Elbrus Release Cycle](#)
    - Define what level CNF testing is for CNTT
      - how it should be architected and implemented should be out of scope
      - how a CNF consumes infrastructure, k8s is an application life cycle manage thus the application is already part of it
      - CNF requirements from meeting each Tuesday (see below) will continue outside CNTT, CNTT needs to keep pushing forward on what we are comfortable bringing in from there
      - <https://github.com/cntt-n/CNTT/issues/1496> original issue
      - each community may have a superset of those requirements depending upon their needs
      - capabilities are already present in OPNFV and they are integrating CNF conformance, we just need to decide which ones we want to include
    - Initial traceability for CNF requirements
    - Increase platform test coverage
- Chapter 3 Restructuring <https://github.com/cntt-n/CNTT/pull/1868>
  - Please review before the next meeting
- AOB:
  - Regular meeting, Tuesdays @ 4:00pm UTC / 12:00pm EST, looking to collate CNF requirements from multiple sources - please feel free to join and contribute:
