Minutes

[Liang CHEN](#) present CMCC CI/CD practice, structure and how

Saad Sheikh:

1. For Pipeline you only showed Jenkins is it enough? Do you think as we need move from Lab to Staging we need differencing tools and tests to validate it

Yes, Jenkins for pipeline, but implementation are needed to adapt tools from different vendor

2. What about changes in Infra let's say if we upgrade Ceph is such scenarios covered if so how you handle VNF/App do they do test

Currently, according to our test, we get feedback that seldom happened for ceph upgrade once NFVI setup. Or much precisely, the ceph upgrade will not impact the VNF/App usage.

Jim Baker

Is the ODIM project helping with your HDV problem?

I heard about the ODIM project, will check offline if same functionality tool existing with HDV as it only covers redfish interface.
