2021-02-03 - Anuket - RM: Telemetry, monitoring, observability

Topic Leader(s)

- Sukhdev Kapur
- Zlatko Dukic

Topic Overview

The main goal of the presentation was to provide concrete examples of how we in DT are trying to leverage new modern technologies to allow for higher degree of automation in cloud environment. Without proper "ground", which is the main topic of the RM - Observability architecture as an enabler of zero touch approach - we would not have been able to go in a proper direction. Even though it is still work in progress, we have made significant progress and some of it was shown: use case with machine-supported analysis of IMS calls, and also service issue detection with the complete engine for not only deriving/calculating anomalies from raw monitoring data, but also the concept of correlation was brought in the scope.
