# 2021-02-03 - XGVela: Seed Code Design Walk Through

**Topic Leader(s)**

- @Sandeep Karkala (Mavenir)

## Topic Overview

XGVela has received seed code about Telco management PaaS functions donated by Mavenir recently. The functions are TMaaS (Topology management as a service), CMaaS (configuration management as a service), FMaaS (Fault management as a service), VESGW, and other 3 functions. In this session, Mavenir, the contributor of seed code, will show the code and introduce the seed code design though to the community.
