Topic Description

60m, 1/13, [Eric Multanen](#)

11am ET

SFC automation at the edge with EMCO

Topic Overview

The Edge Multicloud Cluster Orchestrator (EMCO) can be used to automate the deployment of Service Function Chains (SFC) comprised of Cloud Native Network Functions (CNF) to multiple edge clusters.

This session shows how EMCO can be utilized to deploy SFCs to a distributed set of edge clusters and then deploy distributed applications to those clusters which utilize the SFC instances in the clusters.
