Topic Description

30m, Liam Fallon

Experiences on performing an interim agile release in the Policy Framework project

Topic Overview

We have performed an interim agile release at the end of our second development sprint in the Policy Framework project. The Maven artifacts and the Docker images are released.

In this session, we will share our experiences in doing the release and also describe a set of scripts we have developed that generate the commits required to release maven and docker artifacts and to manage inter repo snapshot and release references.
