

ONAP/ODL Collaboration Meeting notes 2022-04-19

Attendees

Casey Cain Dan Timoney David McBride Robert Varga Stefan Kobza

Topics

- Followup on Chlorine release for ONAP Kohn release.
 - Followup on RFC 8040 RESTCONF changes
 - Not a simple change
 - May decide to use Sulfur and begin work on a new architectural element to map Biermann-draft API to RFC 8040
 - Dan Timoney proposed adding an nginx in front of the SDNC
 - New mapping element would be used in the ONAP London release to handle interfaces not yet ported to RFC 8040
 - ONAP London would use ODL Chlorine or ODL Argon, introduce a new RESTCONF controller, and an nginx route adaptor.
 - ONAP Kohn is suggested to use the ODL Sulfur release.
 - Robert Vargasuggested that the ONAP community could take on some of the NETCONF development so they don't need to build their adaptor from scratch.
