2022-06-14 - ODIM: Overview and status

Topic Leader(s)

- Martin Halstead

Topic Description

60m Martin Halstead

Overview of the ODIM project, current feature set and planned integration work

Topic Overview

The purpose of the presentation is to give an overview of the ODIM project - why it was formed and how it could be used to expose any data center infrastructure through a fully standards based DMTF Redfish data model. ODIM aims to address the differences in heterogeneous infrastructure management within data centers while scaling infrastructure management through resource aggregation across massively distributed data centers as prevalent in Telco and other networks today.
