

Convince Your Boss!

Dear {Boss},

I'd like to attend the [Linux Foundation Networking](#)'s premier Developer event on all things open source networking, the [Developer & Testing Forum](#), which is being held in Budapest, Hungary on 13 Nov 2023 to 16 Nov 2023

I've researched many similar conferences and this is THE event to attend for networking developers, sysadmins, dev-ops professionals, architects and community leadership professionals. Not only is this event a way to expand my knowledge, skills, and help solve technical issues with the best and brightest in the community, it's also a technical forum on open source networking technologies!

Here's how I envision my attendance at the Developer & Testing Forum in November of 2023 strengthening our organization:

1. The Developer & Testing Forum serves as an invaluable platform for networking developers to connect. This forum not only covers the foundational open source technologies, but also delves into the latest trends in networking, cloud-native, edge computing, AI, and other related fields. By bringing together developers, sysadmins, DevOps professionals, and IT architects, the forum offers a unique opportunity for collaboration, allowing them to shape the future of technology.
2. The Developer and Testing Forum is a crucial technical event for the LFN project communities, bringing together over 300 open-source community members three times a year. The forum serves as a platform for individuals responsible for building and testing the code to engage in virtual sessions, discussing release, feature, and architecture planning, as well as problem-solving. Multi-project collaborations are also discussed during the sessions.

Ultimately, this is an event that is tailor made for the community by the community to accelerate project collaboration, influence technical decisions, and build cross-project confidence. You can learn more about the Developer & Testing forum by viewing the recorded sessions for the [June 2023](#), [February 2023](#), and [November 2022](#) events.

I would be happy to write a post-event report to share what I've learned with the rest of our team and to recommend any open source paths to which we can contribute and from which we can benefit. Note that events like this and the learnings and connections made are some of the benefits of being a member of the LFN community.

Best of all, there is no cost! But, it's coming up quickly and my presence is key to help support our organizational open source strategy. Please let me know if you have any questions or concerns. I hope we can make this opportunity work.

Thank you,

{Your Name}
