Topic Description

60m, [Robert Varga](#)

Application landscape has evolved in the 10 years since OpenDaylight has started. We will discuss feedback received from our recent survey and how to adapt to this changed landscape.

Topic Overview

OpenDaylight is now coming to be 10 years old. It has been designed and implemented with the assumption of the classic Java application server, without any external dependencies.

These design tenets are no longer relevant and are forcing us to maintain a lot of code infrastructure that is weighing us down and makes for a huge barrier to adoption.

We will discuss how to move forward in several, subtly-interconnected areas:

- The.opendaylight.org website and our messaging workflows
- Use case packaging and delivery
- Deployment assumptions, such as existing infrastructure and integrations

Slides & Recording

YouTube

Please indicate your session type in the blank space below and then remove this Info field.

- Demo / Informational (non-interactive)
 - You may be asked to pre-record this session which will be made available on-demand.
- Live Interactive Session

LFN Staff may elect to publish some videos to YouTube. Please indicate here if you do not want your session to be published to YouTube.
