

Performance Testing

A frequent request of many program users (i.e. service providers) has been the inclusion of performance testing withing the compliance programs. The purpose of this work stream is to develop a proposal for the test teams (i.e. Dovetail, vsperf, etc.) to build upon to support the inclusion of performance testing within the compliance programs. The proposal will need to address how the performance requirements are set in a fair, unbiased way, that can be supported and updated as hardware and software continues to mature.

Proposal Development

- Initial input was provided in this [presentation](#).
- Open questions and discussion is taking place on this [Etherpad](#).
- Agreements are captured below based on these discussions and a final call for consensus during a CVC teleconference.
