

Topic Proposals for Jan '19

THIS PAGE HAS BEEN UNLOCKED. Please add the slides for your session here.

Recordings can be found here: [Event Recordings Jan '19](#)

Organizer or Presenter (s)	Session Title	Short Description	Slides
Thierry Evanno Jonne Soininen	Nokia Local Management Welcome Nokia Open Source Initiatives		
Roberto Kung	Orange Welcome to the Community		 Orange we...unity.pdf

Heather Kirksey, Phil Robb, Kenny Paul	Remarks for the Linux Foundation and Meeting Logistics		
Erwan Duval Barbara Orlandi	Nokia Lunch Demos	<ul style="list-style-type: none"> SDM Expert - Solving data migration challenges 5G NetWork Slicing 	
ONAP TSC Members	ONAP TSC MEETING	Regular TSC mtg	
OPNFV TSC Members	OPNFV TSC Meeting	Regular TSC mtg	
David McBride	OPNFV Gambia Retrospective	Review Gambia release and identify areas for improvement	
Frank Brockners Donald Hunter	DCAE-PNDA Integration; Overview, Status and next Steps	<p>Overview of the PNDA-DCAE integration - that became available with Casablanca. Discussion of current status and evolution of the integration.</p> <p>PNDA LFN Board Review short.pptx</p>	
David McBride	Intern Lightning Talks	<p>Each intern will do a 10 minute lightning talk about their project, followed by 3 minutes of questions.</p> <ol style="list-style-type: none"> Alisha Aneja Girish Lingappa Amir Mohamad Adarsh Pal Singh 	<ul style="list-style-type: none"> Adarsh Pal Singh - Intern Talk at OPNFV Gambia Plugfest.pdf Girish Lingappa - Intern talk at OPNFV Gambia Plugfest.pdf Plugfest_compass.pdf Amir Mohamad - Intern Talk at OPNFV Gambia Plugfest.pdf
Sofia Wallin Thanh Ha (zxiro) Trevor Bramwell	LFN documentation		
Sofia Wallin	ONAP documentation		
Tomi Juvonen	OPNFV Testing Pain Points and Requirements	<p>Testing pain point and requirement discussion what attendees have. Some topics:</p> <ul style="list-style-type: none"> OpenStack services in containers (apex) Functest skips features testing. Should always test OpenStack Fenix gerrit patch set to trigger Apex snapshot deployment and testing on top of it 	https://etherpad.opnfv.org/p/PF_Gambia_Testing_Pain_And_Req
Tomi Juvonen	Doctor - Rolling Maintenance and Enhanced Fault Management Demo	<p>I) Doctor maintenance use case demo using new OpenStack Fenix. ETSI defined, OPNFV Doctor refined, Implemented in OpenStack.</p> <p>II) Doctor enhanced fault management demo. Now many times faster.</p>	<p>Presentation has demo as video, so linked here as size is too big:</p> <p>Doctor - Rolling Infrastructure Maintenance and Enhanced Fault Management</p>

Tomi Juvonen	Doctor - OpenStack Fenix BoF	From Doctor maintenance requirements to OpenStack Fenix. Fenix project update and discussion	 Fenix-plu...mbia.pptx
ramki krishnan Srinivasa Addepallirraghu@ciena.com Vimal Begwani Dileep Ranganathan Huang Haibin Mike Elliott Prakash Ramchandran	ONAP Edge Architecture /Implementation & OPNFV /OpenStack Edge Efforts Collaboration	<p>ONAP Dublin deep dive</p> <p>a. Analytics as a Service - Dileep Ranganathan Srinivasa Addepalli ramki krishnan</p> <p>Big data analytics that include collection, analysis and closed loop actions are best performed closer to the data source. Analytics include infrastructure analytics, VNF specific analytics and application (including IOT-5G) centric analytics.</p> <p>One of the major challenges to enable analytics near data source is bringing up analytics framework at various cloud regions and then bringing up analytics applications on demand basis. This presentation discusses the method to automate steps involved in deploying analytics framework and analytics applications. This presentation details on</p> <ul style="list-style-type: none"> • Automation of analytics framework, application deployment using existing ONAP mechanisms • Configuration orchestration across multiple components of analytics applications and framework, again using existing ONAP mechanisms. • Gaps in achieving above and the enhancements required in existing ONAP components. • Gaps in achieving analytics that need NFVI metrics, VNF metrics and application metrics. • needs and mechanisms to deploy ML/DL training and inferring analytics • Popular technologies expected in analytics framework by analytics application vendors and guidelines to develop analytics applications. • Integrating other 3rd Party Analytics frameworks and applications <p>b. Fine Grained Placement Service (F-GPS) - GUEYOUNG JUNG, Arun Gupta, ramki krishnan</p> <ul style="list-style-type: none"> • Distributed DC Modelling <p>Dublin & Beyond - Distributed ONAP/3rd Party Management Application Architecture - Vimal Begwani ramki krishnan Srinivasa Addepalli @Mike Elliott</p> <ul style="list-style-type: none"> ▪ Deployment workflow with OOM ▪ Distributed System Management Leveraging K8S <p>Dublin & Beyond - Managing MEC Apps with ONAP - Srinivasa Addepalli, Huang Haibin</p> <ul style="list-style-type: none"> • Presentation & Discussion • Demo - In ONAP R3 cycle, we have done some development and testing to extending ONAP into Edge Computing. <p>OpenStack/OPNFV Edge Initiatives and ONAP Collaboration - R. Prakash R.Prakash</p>	 ONAP-DDF-Distr...mework-v1.pptx

Qihui Zhao	Edge Cloud experience from China Mobile	<ul style="list-style-type: none"> Experience of CMCC on edge cloud testing (OpenStack & Acceleration) 	 <p>Edge Clo...Zhao.pdf</p>
Adolfo Perez-Duran	ONAP multi-architecture container images	<p>In 2015 and early 2016 the Docker community created the v2.2 image specification with a new type—a manifest list—to represent a list of platforms (OS, CPU architecture, etc) and references to platform specific layers for different runtimes.</p> <p>In September 2017 Docker's Official Images became multi-platform. Running "run docker run hello-world" will pull and run the correct hello-world image whether you are using ARM, x86-64 Linux, Windows, IBM Z mainframes or any other system where Docker runs.</p> <p>Because ONAP is vendor-agnostic, multi-platform support in the container ecosystem brings capabilities the ONAP community has been waiting for a long time.</p> <p>The introduction of multi-architecture images will improve usability and deployability of ONAP containers across architectures and platforms. Developers no longer need workarounds such as adding an architecture-specific prefix to image names.</p> <p>This session will:</p> <ul style="list-style-type: none"> Introduce the key concepts behind multi-architecture container images. Describe and discuss what it means for a container image (e.g. Docker) to be multi-architecture. Demonstrate how multi-arch images are built 	 <p>onap_multi_cpu_...ture_images.pdf</p>

<p>Lei Huang @Changjun Wang Bin Yang @Howard Huang</p> <p>(remote presentation from China, please help to assign a time slot in the morning in France time)</p>	<p>Acceleration Management</p>	<p>As we know, HPA provides ONAP with capability of awareness of underlying hardware platform, and with that ONAP is able to leverage HPA features, such as DPDK and SR-IOV to locate and onboard VNFs on the right platforms for the purpose of performance mostly. However with maturity of ONAP and requirements of new VNFs, there exist some gaps inside the current HPA framework, for example, ambiguity tolerance in TOSCA templates and service assurance after VNF onboarding.</p> <p>Apart from the above, taking edge computing or 5G as an example, we're facing more and more new workloads and new scenarios, where high bandwidth and low latency are highly required in the requirements. For instance, those VNFs which do real-time analysis and diagnosis on surveillance video stream need accelerators like GPU and FPGA evidently to achieve the goals, and should consider and plan corresponding life-cycle management, hardware metrics monitoring, QoS, etc. for the accelerators.</p> <p>In the presentation, we're about to cover the following:</p> <ul style="list-style-type: none"> - Gaps between the existing HPA framework and the new requirements on accelerators - Difference between HPA and acceleration management - Framework proposal to support acceleration management in ONAP - Changes to enhance ONAP and the HPA framework - Interoperability with Multi-Cloud and VIMs - Our plans 	 <p>AM slide in DDF.pdf</p>

<p>Tal Liron</p>	<p>Let's Move Everything to Kubernetes</p>	<p>Can Kubernetes be used as the delivery mechanism for "legacy" VNFs as well as CNFs, from data center to edge? Is it inevitable? Is it even a good idea?</p> <p>Now that I got your attention, I will propose the "KNFM" initiative, combining the following:</p> <ol style="list-style-type: none"> 1. Kubernetes = both VIM and NFM equivalent 2. KubeVirt to handle the "V" in VNF 3. An operator for "legacy" lifecycle management (OpenStack Heat compatible) = G-VNFM equivalent 4. Custom operators (e.g. Ansible operators) to allow for vendor enhancements = S-VNFM equivalent 5. Multus to attach the data plane (as well as the expanded control plane that some VNFs require) 6. A controller to manage these extra networks 7. ONAP on top for management and integration: OpenDaylight for SDN, TOSCA for stitching together network services, BPMN for OSS/BSS, A&AI, DCAE <p>The technological ecosystem is almost there, it just needs an additional nudge to bring the pieces together.</p>	 <p>Let's Move Every...o Kubernetes.pdf</p>

Samuli Kuusela et al	ONAP Security Risk Assessment	<p>In this creative session, we'll identify security risks: threats and vulnerabilities for the assets in ONAP deployment. This is a continuing exercise from the F2F event in Beijing in June. The target of the assessment is a typical ONAP deployment with any needed assumptions on the deployment environment. Probably we need a few typical-ones like private cloud, public cloud.</p> <p>After the risk identification, we'll do rating: risk impact & risk probability risk level. The risks with unacceptable high level shall be mitigated, by adding items on projects' backlogs as necessary.</p> <p>A fictitious example, to give you a more concrete view:</p> <ul style="list-style-type: none"> -<u>Asset</u>: VNF O&M passwords stored in ONAP -<u>Threat</u> (can be several per asset): unauthorized disclosure -<u>Vulnerability</u> (can be several per threat): passwords included in plain text in a log file -<u>Risk mitigation</u>: do not include any passwords in log files <p>For more info, please see Risk Assessment concepts, definitions, process: https://wiki.onap.org/download/attachments/11928162/ONAP%20Attack%20Vector%20Analysis%20-%20Overview%20of%20the%20Process.pptx?api=v2</p>	Recording: ONAP Security Risk Assessment Workshop.mp4
Gildas Lanilis Stephen Wong @Chaker Al Hakim	ONAP on Service Mesh	<p>To ease operation of ONAP deployment, we explored running containerized ONAP components on Istio-K8S. By leveraging OPNFV Clover, we also gained more visibility into the deployment. In this presentation, we will present:</p> <ul style="list-style-type: none"> • The general benefits of running microservice pattern application on a service mesh • How such deployment will benefit ONAP? • What is OPNFV Clover, and how it helps microservice based applications via augmenting Istio? • Demo 	 <p>ONAP-Clover.pdf</p>
